<u>MODEL</u>	<u>DEST.</u>	<u>CHASSIS NO.</u>
PHM-14M8U	US/CND	SCC-N81A-A
PHM-20M8U	US/CND	SCC-N81B-A

HD TRINITRON® COLOR MONITOR

**SONY®**

## **WARNING**

This manual is intended for qualified service personnel only.

To reduce the risk of electric shock, fire or injury, do not perform any servicing other than that contained in the operating instructions unless you are qualified to do so. Refer all servicing to qualified service personnel.

### **WARNING!!**

AN ISOLATION TRANSFORMER SHOULD BE USED DURING ANY SERVICE TO AVOID POSSIBLE SHOCK HAZARD, BECAUSE OF LIVE CHASSIS. THE CHASSIS OF THIS RECEIVER IS DIRECTLY CONNECTED TO THE AC POWER LINE.

### **SAFETY-RELATED COMPONENT WARNING !!**

COMPONENTS IDENTIFIED BY MARK  ON THE SCHEMATIC DIAGRAMS, EXPLODED VIEWS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY. CIRCUIT ADJUSTMENTS THAT ARE CRITICAL TO SAFE OPERATION ARE IDENTIFIED IN THIS MANUAL. FOLLOW THESE PROCEDURES WHENEVER CRITICAL COMPONENTS ARE REPLACED OR IMPROPER OPERATION IS SUSPECTED.

### **ATTENTION!!**

AFIN D'ÉVITER TOUT RISQUE D'ÉLECTROCUTION PROVENANT D'UN CHÂSSIS SOUS TENSION, UN TRANSFORMATEUR D'ISOLEMENT DOIT ÊTRE UTILISÉ LORS DE TOUT DÉPANNAGE. LE CHÂSSIS DE CE RÉCEPTEUR EST DIRECTEMENT RACCORDÉ À L'ALIMENTATION SECTEUR.

### **ATTENTION AUX COMPOSANTS RELATIFS À LA SÉCURITÉ!!**

LES COMPOSANTS IDENTIFIÉS PAR UNE MARQUE  SUR LES SCHÉMAS DE PRINCIPE, LES VUES EXPLOSÉES ET LES LISTES DE PIÈCES SONT D'UNE IMPORTANCE CRITIQUE POUR LA SÉCURITÉ DU FONCTIONNEMENT. NE LES REMPLACER QUE PAR DES COMPOSANTS SONY DONT LE NUMÉRO DE PIÈCE EST INDiqué DANS LE PRÉSENT MANUEL OU DANS DES SUPPLÉMENTS PUBLIÉS PAR SONY. LES RÉGLAGES DE CIRCUIT DONT L'IMPORTANCE EST CRITIQUE POUR LA SÉCURITÉ DU FONCTIONNEMENT SONT IDENTIFIÉS DANS LE PRÉSENT MANUEL. SUIVRE CES PROCÉDURES LORS DE CHAQUE REMPLACEMENT DE COMPOSANTS CRITIQUES, OU LORSQU'UN MAUVAIS FONCTIONNEMENT EST SUSPECTÉ.

# SAFETY CHECK-OUT

(US Model only)

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

1. Check the area of your repair for unsoldered or poorly-soldered connections. Check the entire board surface for solder splashes and bridges.
2. Check the interboard wiring to ensure that no wires are "pinched" or contact high-wattage resistors.
3. Check that all control knobs, shields, covers, ground straps, and mounting hardware have been replaced. Be absolutely certain that you have replaced all the insulators.
4. Look for unauthorized replacement parts, particularly transistors, that were installed during a previous repair. Point them out to the customer and recommend their replacement.
5. Look for parts which, though functioning, show obvious signs of deterioration. Point them out to the customer and recommend their replacement.
6. Check the line cord for cracks and abrasion. Recommend the replacement of any such line cord to the customer.
7. Check the condition of the monopole antenna (if any). Make sure the end is not broken off, and has the plastic cap on it. Point out the danger of impalement on a broken antenna to the customer, and recommend the antenna's replacement.
8. Check the B+ and HV to see they are at the values specified. Make sure your instruments are accurate; be suspicious of your HV meter if sets always have low HV.
9. Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

## LEAKAGE

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microamperes). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2V AC range are suitable. (See Fig. A)

## HOW TO FIND A GOOD EARTH GROUND

A cold-water pipe is guaranteed earth ground; the cover-plate retaining screw on most AC outlet boxes is also at earth ground. If the retaining screw is to be used as your earth-ground, verify that it is at ground by measuring the resistance between it and a coldwater pipe with an ohmmeter. The reading should be zero ohms. If a cold-water pipe is not accessible, connect a 60-100 watts trouble light (not a neon lamp) between the hot side of the receptacle and the retaining screw. Try both slots, if necessary, to locate the hot side of the line, the lamp should light at normal brilliance if the screw is at ground potential. (See Fig. B)

Fig. A. Using an AC voltmeter to check AC leakage.

Fig. B. Checking for earth ground.

## **SECTION 1 OPERATING INSTRUCTIONS**

**PHM-20M8U  
PHM-14M8U**

©1998 by Sony Corporation

This section is extracted from  
operation manual.

### Owner's Record

The model and serial numbers are located at the rear. Record these numbers in the spaces provided below.

Refer to these numbers whenever you call upon your Sony dealer regarding this product.

Model No. \_\_\_\_\_

Serial No. \_\_\_\_\_

### WARNING

**To prevent fire or shock hazard, do not expose the unit to rain or moisture.**

**Dangerously high voltages are present inside the unit.**

**Do not open the cabinet. Refer servicing to qualified personnel only.**

In the event of a malfunction or when maintenance is necessary, consult an authorized Sony dealer.

### For the Customers in the USA

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications.

Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

You are cautioned that any changes or modifications not expressly approved in this manual could void your authority to operate this equipment.

### For the customers in Canada

This Class A digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations.

**ATTENTION – When the product is installed in a rack:**

#### a) Elevated operating ambient temperature

If installed in a closed or multi-unit rack assembly, the operating ambient temperature of the rack environment may be greater than room ambient. Therefore, consideration should be given to installing the equipment in an environment compatible with the manufacturer's maximum rated ambient temperature (T<sub>mra</sub>: 0°C to 35°C).

#### b) Reduced air flow

Installation of the equipment in a rack should be such that the amount of air flow required for safe operation of the equipment is not compromised.

#### c) Mechanical loading

Mounting of the equipment in the rack should be such that a hazardous condition is not achieved due to uneven mechanical loading.

#### d) Circuit overloading

Consideration should be given to the connection of the equipment to the supply circuit and the effect that overloading of circuits might have on overcurrent protection and supply wiring. Appropriate consideration of equipment nameplate ratings should be used when addressing this concern.

#### e) Reliable earthing

Reliable earthing of rack-mounted equipment should be maintained. Particular attention should be given to supply connections other than direct connections to the branch circuit (e.g., use of power strips).

#### f) Gap keeping

The upper and lower gaps of rack-mounted equipment should be at least 44 mm (1 7/8 inches).

### About this manual

Before operating the unit, please read this manual thoroughly and retain it for future reference.

The explanation given in this manual can be applied to the following models unless noted otherwise.

When explanation differs among models, this is clearly indicated in this manual.

- PHM-14M8U (14-inch monitor)
- PHM-20M8U (20-inch monitor)

Illustrations of the video monitor are of the PHM-20M8U.

## Precautions

### On safety

- Operate the unit only with a power source as specified in the "Specifications" section.
- The nameplate indicating operating voltage, power consumption, etc. is located on the rear.
- Should any solid object or liquid fall into the cabinet, unplug the unit and have it checked by qualified personnel before operating it any further.
- Unplug the unit from the wall outlet if it is not to be used for several days or more.
- To disconnect the AC power cord, pull it out by grasping the plug. Never pull the cord itself.
- The socket-outlet shall be installed near the equipment and shall be easily accessible.

### On installation

- Allow adequate air circulation to prevent internal heat build-up. Do not place the unit on surfaces (rugs, blankets, etc.) or near materials (curtains, draperies) that may block the ventilation holes.
- Do not install the unit in a location near heat sources such as radiators or air ducts, or in a place subject to direct sunlight, excessive dust, mechanical vibration or shock.

### On cleaning

To keep the unit looking brand-new, periodically clean it with a mild detergent solution. Never use strong solvents such as thinner or benzene, or abrasive cleansers since they will damage the cabinet. As a safety precaution, unplug the unit before cleaning it.

### On repacking

Do not throw away the carton and packing materials. They make an ideal container which to transport the unit.

If you have any questions about this unit, contact your authorized Sony dealer.

## Features

### Picture

#### Trinitron<sup>®</sup> picture tube

Trinitron tube provides a high resolution picture. When the 16:9 picture is received, horizontal resolution is more than 600 TV lines (PHM-14M8U) or 700 TV lines (PHM-20M8U) at the center of the picture.

#### Beam current feedback circuit

The built-in beam current feedback circuit assures stable white balance.

### Inputs

#### Component/analog RGB input connectors

Component or analog RGB signals from video equipment can be input through these connectors. You can select component or RGB signals from the on-screen menu.

#### External sync input connectors

The monitor can be operated on a sync signal supplied from an external sync generator. You can select the INT, EXT, or HD/VD signal in the on-screen menu.

#### Automatic termination

(only terminals with the  $\Delta$  mark)

The BNC input connectors on the rear panel are terminated at 75 ohms inside, when no cable is connected to the loop-through output connectors. When a cable is connected to an output connector, the 75-ohm termination is automatically released.

### Functions

#### Display of the SMPTE 240M/274M signal

The monitor can display the SMPTE 240M/274M signal: Attach the 16:9 frame and select the 16:9 mode in the on-screen menu.

#### Display of the 525 progressive signal

The monitor can display the 525 progressive signal (VGA mode of Sony DXC-9000 video camera): Select the 4:3 mode in the on-screen menu. When 16:9 is selected, the signal can also be monitored in the 16:9 mode.

#### Underscan mode

The signal normally scanned outside of the screen can be monitored in the underscan mode.

#### Note

When the monitor is in the underscan mode, the dark RGB scanning lines may appear on the top edge of the screen. These are caused by an internal test signal, rather than the input signal.

#### Horizontal/vertical delay mode

The horizontal and vertical sync signals can be checked simultaneously in the H/V delay mode.

#### Auto/manual degaussing

Degaussing of the screen can be performed automatically when the power is turned on, or manually by pressing the DEGAUSS button.

#### Area marker function for the 4:3 mode (only for SMPTE 240M/274M signal)

When the SMPTE 240M/274M signal is input, the area marker is displayed to confirm 4:3 aspect. The position of the area marker can be adjusted in the on-screen menu.

#### On-screen menus

You can adjust the monitor for connected equipment by using the on-screen menus.

#### Parallel remote interface

The On/Off of the tally lamp or input select can be remotely controlled by connecting the control console, remote control unit, etc. to the REMOTE connector on the rear panel.

#### Serial remote interface box

By using the supplied serial remote interface box, the monitor can be controlled from personal computers via the RS-422A serial interface.

#### EIA standard 19-inch rack mounting

By using an MB-502B (for PHM-14M8U) or SLR-103A (for PHM-20M8U) Mounting Bracket (not supplied), the monitor can be mounted in an EIA standard 19-inch rack. For details on mounting, see the instruction manual of the mounting bracket kit.

#### HD SDI (High Definition Serial Digital Interface) Kit

By using the optional HD SDI input adaptor BKM-301HD, the monitor can display the serial digital signal from a digital VCR.

#### Detachable 16:9 frame

The monitor can display the 16:9 picture of the SMPTE 240M/274M signal or 293M signal by attaching the 16:9 frame. To monitor the 4:3 picture from a Sony DXC-9000 video camera, remove the 16:9 frame.

## Attaching the 16:9 Frame

- Slide the frame downward. The frame is removed.

### To attach the hole covers

To monitor the 4:3 picture, attach the hole covers to the holes on the front panel of the monitor.

1) Trinitron is a registered trademark of Sony Corporation.  
4

## Attaching the Serial Remote Interface Box

To control the monitor from personal computers via the RS-422A serial interface, attach the supplied serial remote interface box.

### 1 Remove two screws.

### 2 Connect the connector of the serial remote box to the REMOTE connector.

### 3 Tighten two screws.

## Power Sources

### House Current

Connect the supplied AC power cord to the AC IN socket on the rear panel and to a wall outlet.

### To connect an AC power cord securely with the AC plug holder

Plug the power cord into the AC IN socket. Then, attach the AC plug holder (supplied) on top of the AC power cord.

Slide the AC plug holder over the cord until it connects with the attached holder.

### To remove the AC power cord

Pull out AC plug holder by squeezing the up and down sides.

### To connect a Cable to a BNC Connector

Connect a coaxial cable with a BNC plug to the BNC connectors on the rear panel as illustrated below.

## Location and Function of Parts and Controls

### Front Panel

#### 1 Tally indicator

This indicator lights up. The tally control connection is needed.

For the pin assignment, see "Specifications" on page 18.

#### 2 POWER switch and indicator

Depress to turn the monitor on. The indicator will light up in green. To turn the power off, press this again.

#### 3 REMOTE indicator

This indicator lights up when you connect a remote controller to the REMOTE connector with the supplied cable or when you set SERIAL REMOTE to ON. The controls on the front panel do not work when this indicator lights up in PARALLEL REMOTE.

For the trouble detect function, see page 9.  
For details on how to connect the cable, see page 18.

#### 4 VOLUME control

Turn this control clockwise or counterclockwise to obtain the desired volume.

#### 5 CONTRAST control

Turn clockwise to make the contrast stronger and counterclockwise to make it weaker.

#### 6 CHROMA (chrominance) control

Turn clockwise to make the color intensity stronger and counterclockwise to make it weaker.

#### 7 BRIGHT (brightness) control

Turn clockwise for more brightness and counterclockwise for less.

#### 8 APERTURE control

Turn clockwise for more sharpness and counterclockwise for less.  
When the control is set to MIN, the picture becomes flat without corrections.

#### Note

The CHROMA and APERTURE control settings have no effect on the pictures of RGB signals.

#### 9 MENU/EXIT button

Press to make the menu appear.  
Press to return to the previous screen in the menu.

#### 10 ENTER/SELECT button

Press to decide a selected item in the menu.

#### 11 ↑/+, ↓/- buttons

- Press to move the cursor (▶) or adjust selected value in the menus.
- Press the ↑/+ and ↓/- buttons simultaneously to reset the adjusting item to the factory preset level.

#### 12 4:3 area marker button

Press (light on) to display the 4:3 area marker when the SMPTE 240M/274M signal is displayed. You can confirm the 4:3 aspect. The position of the area marker can be adjusted in the on-screen menu. To display the area marker when the SMPTE 240M/274M signal is received, keep the indicator on.

#### Note

The 4:3 area marker is not displayed when a signal other than the SMPTE 240M/274M signal is received or when the H/V delay mode is selected.

#### 13 H/V DELAY select button

Press this button (light on) to observe the horizontal and vertical sync signals at the same time.  
The horizontal sync signal is displayed in the left quarter of the screen; the vertical sync signal is displayed near the center of the screen.

#### 14 UNDER SCAN button

Press (light on) for underscanning. The display size is reduced by approximately 5% so that four corners of the raster are visible. By pressing the button again, the display returns to the normal size (light off).

#### 15 DEGAUSS button

Press this button momentarily. The screen will be demagnetized.  
Wait for 10 minutes or more before activating this button again.

#### 16 INPUT A select button

Press to monitor the signal fed through the input A connectors (light on). You can monitor the component signal, RGB signal, EXT SYNC (composite external sync) signal and HD/VD (external sync) signal. Select the signal in the on-screen menu.

#### 17 INPUT B select button

Press to monitor the signal fed through the input B connectors (light on). You can monitor the component signal, RGB signal, EXT SYNC (composite external sync) signal and HD/VD (external sync) signal. Select the signal in the on-screen menu.

#### 18 INPUT C select button

Press to monitor the serial digital signal from the digital VCR when the optional BKM-301HD HD SDI input adaptor is attached.

For details, see the operating instruction manual supplied with the BKM-301HD.

#### Trouble detect function

When trouble occur, the REMOTE indicator blinks. When the indicator blinks, press the POWER button to turn off the power and then turn it on again. If the blinking of the indicator does not stop after the above operation, consult your nearest Sony dealer.

## Location and Function of Parts and Controls

### Rear Panel

#### ① AC IN socket

Connect the supplied AC power cord to this socket. "~" means Alternating Current.

#### ② Input C

Use to attach the HD SDI input adaptor BKM-301D (optional).

For details, see the operating instruction manual supplied with the BKM-301D.

#### ③ Input A IN/OUT connectors

Input connectors for the component signal, RGB signal, EXT SYNC (composite external sync) signal, HD/VD (external sync) signal and audio signal and their loop-through output connectors.

Press the INPUT A select button to monitor the signal fed from these connectors.

##### Y/G IN, Pa/B IN, Pa/R IN connectors (BNC):

Input connectors for the component signals and RGB signals.

##### To monitor the component signal

Connect to the YPaPb input connectors of a video camera.

Select the signal in the YPaPb/GBR menu.

##### To monitor the analog RGB signal

Connect to the analog RGB output connectors of a video camera.

Select the signal in the YPaPb/GBR menu.

##### Y/G OUT, Pa/B OUT, Pa/R OUT connectors (BNC):

Loop-through outputs of the Y/G IN, Pa/B IN, Pa/R IN connectors.

When the cable is connected to these connectors, the 75-ohms termination of the input is released, and the signal input to the Y/G, Pa/B, Pa/R IN connectors is output from these connectors.

##### To output the component signal

Connect to the YPaPb input connectors of another video monitor.

##### To output the analog RGB signal

Connect to the analog RGB input connectors of another video monitor.

##### HD/EXT SYNC IN connector (BNC):

Input connector for the HD signal or EXT SYNC (composite external sync) signal, when this monitor operates on an external sync signal.

Select the signal in the on-screen menu.

##### To input the EXT SYNC (composite external sync) signal

Connect to a sync generator.

Select the signal in the SYNC SELECT menu.

##### To input the HD signal when this monitor operates on the HD/VD (external sync) signal

Connect to the Sony video camera DXC-9000, etc.

Select the signal in the SYNC SELECT menu.

##### HD/EXT SYNC OUT connector (BNC):

Loop-through output of the HD/EXT SYNC IN connector.

When the cable is connected to this connector, the 75-ohms termination of the input is released, and the signal input to the HD/EXT SYNC IN connector is output from this connector.

##### To output the EXT SYNC (composite external sync) signal

Connect to the external sync input connector of another video monitor to use the sync signal fed through this connector.

##### To output the HD signal when this monitor operates on the HD/VD (external sync) signal

Connect to the HD input connector of another video monitor to use the sync signal fed through this connector.

##### VD IN connector (BNC):

Input connector for the VD signal, when this monitor operates on HD/VD (external sync) signal.

Connect to the Sony video camera DXC-9000, etc.

Select the signal in the SYNC SELECT menu.

##### VD OUT connector (BNC):

Loop-through output of the VD IN connector.

When the cable is connected to this connector, the 75-ohms termination of the input is released, and the signal input to the VD IN connector is output from this connector.

Connect to the VD input connector of another video monitor to use the sync signal fed through this connector.

##### AUDIO IN jack (phono jack):

Connect to the audio output of video equipment when the component or analog RGB is input.

##### AUDIO OUT jack (phono jack):

Loop-through outputs of the AUDIO IN connector.

#### ④ REMOTE connector (20-pin)

Connect to the tally output of a control console, special-effect generator, etc. The tally lamp on the front panel will be turned on and off by the connected equipment. This connector can also be used for connecting a remote control unit or supplied serial remote interface box.

For details on the pin assignment of this connector, see page 18.

For attaching the serial remote interface box, see page 6.

#### ⑤ Input B IN connectors

Input connectors for the component signal, RGB signal, EXT SYNC (composite external sync) signal, HD/VD (external sync) signal and audio signal.

Press the INPUT B select button to monitor the signal fed from these connectors.

For details on each connector, please refer to the input A IN connectors.

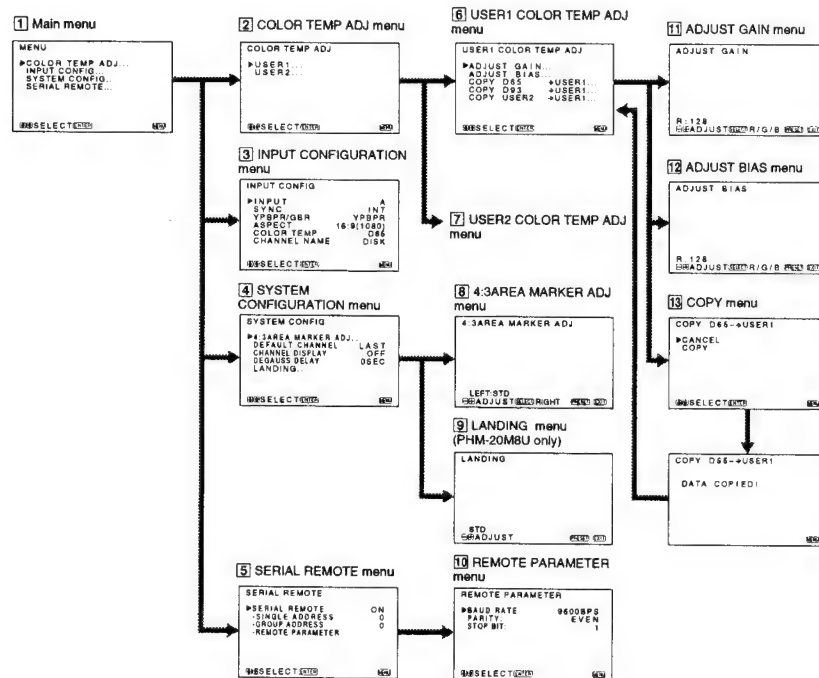

# Using On-Screen Menus

## Menu Configuration

The flow chart shows the different levels of on-screen menus that you can use to make various adjustments and settings.

For details of each menu, see pages 14 to 15.

## Operating through Menus

### Functions of the buttons

There are four menu operation buttons on the front panel of the monitor.

The following tables shows how these four buttons function when using the menus.

Button	To select menu item	To adjust selected menu item
MENU EXIT	return to the previous menu.	return to the previous menu.
ENTER SELECT	decide a selected item.	select an item.
↑	move the cursor (▶) upwards.	increase selected value.
↓	move the cursor (▶) downwards.	decrease selected value.

**RESET** Press the ↑/+ and ↓/- buttons simultaneously. The current adjusting value is reset to the factory setting.

The buttons that can be used on the menus and adjustment screens are displayed at the bottom of the screen. You can perform menu operations using the displayed buttons.

## Operating procedures

To display the menu, follow this procedure.

- 1 Press the MENU/EXIT button. The main menu appears.
- 2 Move the cursor (▶) to the desired setting menu by pressing the ↑/+ or ↓/- button.
- 3 Press the ENTER/SELECT button. The setting menu selected in step 2 appears.
- 4 Move the cursor (▶) to the desired item by pressing the ↑/+ or ↓/- button.
- 5 Press the ENTER/SELECT button.

The adjustment screen or setting menu selected in step 4 appears, or the item to be adjusted is displayed in yellow.

### To close the menu (to return to the regular screen)

Each time you press the MENU/EXIT button, the on-screen menu returns to the one previously displayed. Press the MENU/EXIT button repeatedly until the regular screen appears.

## Using On-Screen Menus

### The Contents of menu items

The following sentences show the details of each menu.

#### Main menu

Select the item to be set.

#### Setting menu

Select the item to be adjusted or set with the  $\uparrow$ +/ or  $\downarrow$ /- button and ENTER/SELECT buttons.

#### Adjusting menu

Adjust the item with the  $\uparrow$ +/ or  $\downarrow$ /- button. The adjusting value is memorized even when the power is turned off.

#### ① Main menu

Select an item and press the ENTER/SELECT button to go to the following menu.

#### Note

SERIAL REMOTE is displayed only when the serial remote interface box is attached.

#### ② COLOR TEMP ADJ menu

Select USER 1 or USER 2 and press the ENTER/SELECT button to go to the following menu. You can adjust the color temperature.

#### ③ INPUT CONFIGURATION menu

You can select the setting on each input connector. Move the cursor ( $\blacktriangleright$ ) to the desired item by pressing the  $\uparrow$ +/ or  $\downarrow$ /- button and press the ENTER/SELECT button, and the item to be adjusted is displayed in yellow. Set the item by pressing the  $\uparrow$ +/ or  $\downarrow$ /- button. After setting the item, press the ENTER/SELECT button. The set item is displayed in white. To set CHANNEL NAME, after displaying CHANNEL NAME in yellow, select the letter by pressing the  $\uparrow$ +/ or  $\downarrow$ /- button and press the ENTER/SELECT button to select the next letter. After setting the name, press the ENTER/SELECT button.

**INPUT:** A, B, or C

You can set C only when the BKM-301HD is installed.

**SYNC:** INT, EXT, or HD/VD

**YPBPR/GBR:** YPBPR or GBR

**ASPECT:** 4:3 or 16:9

When the SMPTE 240M or SMPTE 274M is received, 16:9 (1035) or 16:9 (1080) is displayed.

**COLOR TEMP:** D65, D93, USER 1, or USER 2

**CHANNEL NAME:** Up to seven letters

#### ④ SYSTEM CONFIGURATION menu

You can set the DEFAULT CHANNEL, CHANNEL DISPLAY, DEGAUSS DELAY or LANDING (PHM-20M8U only).

**DEFAULT CHANNEL:** LAST, A, B, or C

**CHANNEL DISPLAY:** OFF or ON

**DEGAUSS DELAY:** 0SEC to 99SEC

#### ⑤ SERIAL REMOTE menu

You can adjust the serial remote settings when SERIAL REMOTE is set to ON. For details on other settings, see the Interface Manual for Programmers.

#### ⑥ USER 1 COLOR TEMP ADJ menu

When the color temperature of USER 1 is adjusted, select ADJUST GAIN, ADJUST BIAS or one of the COPY modes. To display each menu, press the ENTER/SELECT button.

#### ⑦ USER 2 COLOR TEMP ADJ menu

When the color temperature of USER 2 is adjusted, select ADJUST GAIN, ADJUST BIAS or one of the COPY modes. To display each menu, press the ENTER/SELECT button.

#### ⑧ 4:3AREA MARKER ADJ menu

You can adjust the position of the 4:3 area marker when the SMPTE 240M or SMPTE 274M signal is received.

#### ⑨ LANDING menu (PHM-20M8U only)

If the color is not uniform even after you press the DEGAUSS button, you can adjust the landing so as to obtain color uniformity in this menu. The following two methods are available to adjust the landing.

#### When the signals of the horizontal lines are input and displayed

Press the  $\uparrow$ +/ or  $\downarrow$ /- button until the lines are displayed on the screen as horizontally as possible.

#### When the signals of the white color are input and displayed

Press the  $\uparrow$ +/ or  $\downarrow$ /- button until the white color on the screen become as uniform as possible.

#### To reset the setting to standard

Press the  $\uparrow$ +/ or  $\downarrow$ /- buttons at the same time.

#### ⑩ REMOTE PARAMETER menu

You can adjust the communication parameter of the SERIAL REMOTE connector.

#### ⑪ ADJUST GAIN menu

Adjust the color balance (gain) of the selected USER mode (USER 1 or USER 2).

#### ⑫ ADJUST BIAS menu

Adjust the color balance (bias) of the selected USER mode (USER 1 or USER 2).

#### ⑬ COPY menu

Select the color temperature of the selected USER mode (USER 1 or USER 2) from among D65, D93 and another USER (USER 2 or USER 1).

# Specifications

## Video signal

System	1125/60, 1125/59.94 2:1 (SMPTE 240M/274M), 525/59.94 1:1 (The specifications of the DXC-9000 VGA mode signal) 525/59.94 1:1 (based on SMPTE 293M 525P) <i>For the signal timing chart, see "Signal timing chart" on page 18.</i>
Resolution	PHM-14M8U: 600 TV lines (800 TV lines in the 4:3 mode) PHM-20M8U: 700 TV lines (900 TV lines in the 4:3 mode)
Aperture correction	0 dB to +6.0 dB
Frequency response	24 MHz $\pm 0$ dB -3 dB (in the YPbPr mode)  22 MHz $\pm 0$ dB -3 dB (in the GBR mode)

## CRT

PHM-14M8U	14-inch HR trinitron tube AG pitch 0.25 mm Effective picture size (W/H/D) 267 × 151 × 307 mm (in the 16:9 mode) (10 $\frac{3}{8}$ × 6 × 12 $\frac{1}{8}$ inches) 267 × 200 × 331 mm (in the 4:3 mode) (10 $\frac{3}{8}$ × 7 $\frac{7}{8}$ × 13 $\frac{1}{8}$ inches)
Chromaticity	SMPTE-C phosphor
PHM-20M8U	20-inch HR trinitron tube AG pitch 0.3 mm Effective picture size (W/H/D) 388 × 218 × 445 mm (in the 16:9 mode) (15 $\frac{3}{8}$ × 8 $\frac{5}{8}$ × 17 $\frac{3}{8}$ inches) 388 × 292 × 484 mm (in the 4:3 mode) (15 $\frac{3}{8}$ × 11 $\frac{1}{2}$ × 19 $\frac{1}{8}$ inches)
Chromaticity	SMPTE-C phosphor

## Picture performance

Normal scan	7 % over scan of CRT effective screen area
Under scan	5 % underscan of CRT effective screen area
H. linearity	Less than 5.0 % (typical)
V. linearity	Less than 5.0 % (typical)
Convergence	Central area: PHM-14M8U: 0.4 mm (typical) PHM-20M8U: 0.5 mm (typical) Peripheral area: PHM-14M8U: 0.5 mm (typical) PHM-20M8U: 0.6 mm (typical)
Raster size stability	H: less than 1.0%, V: less than 1.0%
High voltage regulation	Less than 1.0 %
Color temperature	D65/D93/USER1/USER2

## Inputs

Input A/B	Y/G, Pb/B, Pr/R IN BNC connector (×6) YPbPr: 0.7 Vp-p, GBR: 0.7 Vp-p When the sync signal is supplied with the Y/G signal, tri-level sync signal 0.6 Vp-p, or used with the internal sync signal of the negative sync signal 0.3 Vp-p, 75 ohms auto termination function
EXT SYNC IN	(common to HD input connector) BNC connector (×2) 4 Vp-p $\pm 6$ dB, sync negative usable tri-level sync signal 0.6 Vp-p, 75 ohms auto termination function
HD IN	(common to EXT SYNC input connector) BNC connector (×2) 4 Vp-p $\pm 6$ dB, sync negative or positive (same polarity as the VD IN) 75 ohms auto termination function
VD IN	BNC connector (×2) 4 Vp-p $\pm 6$ dB, sync negative or positive (same polarity as the HD IN) 75 ohms auto termination function
AUDIO IN	Phono jack (×2), -5 dBu <sup>1)</sup> , more than 47 kilohms
REMOTE	20-pin connector (×1) <i>See the pin assignment on page 18.</i>

1) 0 dBu = 0.775 V<sub>r.m.s</sub>

## Outputs

Input A	Y/G, Pb/B, Pr/R OUT BNC connector (×3) Loop-through output
EXT SYNC OUT	(common to HD output connector) BNC connector (×1) Loop-through output
HD OUT	(common to EXT SYNC output connector) BNC connector (×1) Loop-through output
VD OUT	BNC connector (×1) Loop-through output
AUDIO OUT	Phono jack (×1) Loop-through output
Speaker output	Output level: 0.8 W

## General

Power consumption	PHM-14M8U: 110 W, 1.4 A (When the HD SDI input adaptor is used: 124 W, 1.5 A) PHM-20M8U: 150 W, 1.8 A (When the HD SDI input adaptor is used: 164 W, 2.0 A)
Power requirement	PHM-14M8U: AC 120V, 1.5 A, 50/60 Hz PHM-20M8U: AC 120V, 2.0 A, 50/60 Hz
Operating temperature	0 to +35°C (32 to 104°F)
Storage temperature	-10 to +40°C (14 to 104°F)
Humidity	Less than 90% (no condensation)
Dimensions	(W/H/D, when the 16:9 frame is not attached, refer to the sizes in the parentheses.) PHM-14M8U: approx. 346 × 340 × 467 (460) mm (approx. 13 $\frac{3}{8}$ × 13 $\frac{1}{2}$ × 18 $\frac{1}{2}$ (18 $\frac{1}{8}$ ) inches) PHM-20M8U: approx. 450 × 458 × 557 (550) mm (approx. 17 $\frac{3}{4}$ × 18 $\frac{1}{8}$ × 22 (21 $\frac{3}{4}$ ) inches)
Mass	PHM-14M8U: approx. 19 kg (approx. 41 lb 14 oz) PHM-20M8U: approx. 34.4 kg (approx. 75 lb 13 oz)

Accessory supplied	AC power cord (1) AC plug holder (1) Tally label (1) Cable with a 20-pin connector (1) 16:9 frame (1) Serial remote interface box (1) Operating instructions (1)
--------------------	--

Design and specifications are subject to change without notice.

## Pin assignment

### REMOTE connector (20-pin mini-DIN)

Pin No.	Signal	Description
1	NC	Brown
2	H/V delay	Red
3	5V (for serial remote)*	Orange
4	SERIAL ON/OFF (for serial remote)	Yellow
5	Degauss	Green
6	RX (for serial remote)	Blue
7	Tally	Purple
8	INPUT B	Gray
9	NC	White
10	GND	Black
11	GND	Pink
12	GND	Light Blue
13	INPUT A	Orange/white
14	NC	Yellow/white
15	GND	Green/white
16	TX (for serial remote)	Blue/white
17	Parallel remote	Purple/white
18	INPUT C**	Gray/white
19	Under scan	Pink/white
20	4:3 area marker	Light Blue/white

\* Be careful not to short-circuit the 3 pin (5 V).

\*\*When the HD SDI input adaptor is used.

## Specifications

### How to connect a remote control unit

Connect No.17 pin to one of the GND pins (No.10 - 12, and 15 pin), then connect pins for the functions you want to use to other GND pins (No.10 - 12, and 15).

### How to light the tally lamp

Connect No.7 pin to one of the GND pins (No.10 - 12, and 15).

### SERIAL REMOTE connector (D-sub 9-pin)

Pin No.	Signal
1	GND
2	TX-
3	RX+
4	GND
5	NC
6	GND
7	TX+
8	RX-
9	GND

### TALLY connector on the serial remote box

When the serial remote box is installed and you want to use the TALLY lamp on the front panel, connect the cable with the phono plug to the TALLY connector. When the TALLY connector is short-circuited, the TALLY lamp lights up.

## Signal Timing Chart

### Timing chart of 4:3 525 progressive mode (525/59.94 1:1)

The signal phase of this mode is for the Sony DXC-9000 video camera.

#### Note

When the 525 progressive signal or VGA signal from a computer is received, the picture phase may be off-center.

#### Horizontal sync

#### Vertical sync

### Timing chart of SMPTE 240M/274M HD/VD signal (1125/60, 1125/59.94 2:1)

Input the HD signal of the same phase as the negative part of tri-level sync signal and the VD signal of the same phase as the vertical sync signal.

#### Note

The HD/VD signal is specified for the SMPTE 240M/274M signal. This HD/VD signal timing chart is unique to this unit.

#### Horizontal sync

#### Vertical sync

### Timing chart of 16:9 525 progressive mode (525/59.94 1:1)

Input the HD signal of the same phase as the part of sync signal and the VD signal of the same phase as the vertical sync signal.

#### Note

The HD/VD signal is not specified for the SMPTE 293M 525P. This HD/VD signal timing chart is unique to this unit.

#### Horizontal sync

#### Vertical sync

## SECTION 2

### SERVICE INFORMATION

#### 2-1. CIRCUIT BOARDS LOCATION

## 2-2. DISASSEMBLY

### 2-2-1. Cover Removal (14inch)

### 2-2-2. Cover Removal (20inch)

### 2-2-3. Q Board Removal

### 2-2-4. Service Position

## 2-2-5. C Board Removal

## 2-2-6. H and J Boards Removal (14inch)

## 2-2-7. H and J Boards Removal (20inch)

## 2-2-8. Picture Tube and X Board Removal (14inch)

## 2-2-9. Picture Tube and X Board Removal (20inch)

- Remove the chassis Assy and bottom cabinet Assy.

### • REMOVAL OF ANODE-CAP

NOTE: Short circuit the anode of the picture tube and the anode cap to the metal chassis, picture tube shield or carbon painted on the picture tube, after removing the anode.

### • REMOVING PROCEDURES

1. Turn up one side of the rubber cap in the direction indicated by the arrow **a**.
2. Using a thumb pull up the rubber cap firmly in the direction indicated by the arrow **b**.
3. When one side of the rubber cap is separated from the anode button, the anode-cap can be removed by turning up the rubber cap and pulling up it in the direction of the arrow **c**.

### • HOW TO HANDLE AN ANODE-CAP

1. Don't hurt the surface of anode-caps with sharp shaped material!
2. Don't press the rubber hardy not to hurt inside of anode-caps!  
A material fitting called as shatter-hook terminal is built in the rubber.
3. Don't turn the foot of rubber over hardly!  
The shatter-hook terminal will stick out or hurt the rubber.

## SECTION 3

### SET-UP ADJUSTMENTS

#### 3-1. PREPARATIONS (1)

##### 3-1-1. Service Mode

In this unit, various adjustments can be performed using the control switches on the front panel for servicing.

Perform the service mode as follows.

##### 1. Entering the Service Mode

Turn On the power and press the MENU key to display the menu.

With the menu displayed, press the ENTER key while pressing the DEGAUSS key to enter the service mode.

##### 2. Using the Service Mode Menu

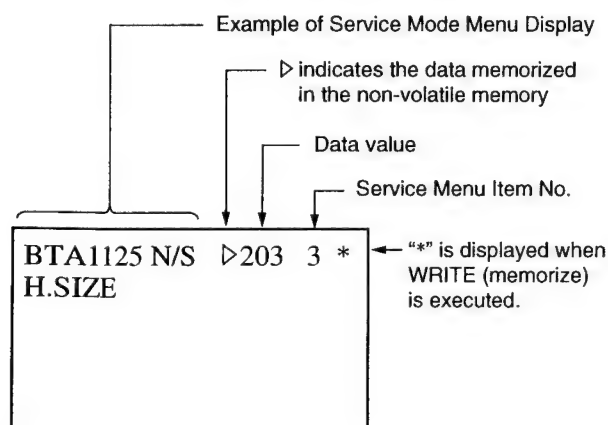

MENU key:Reverses the menu

ENTER key:Forwards the menu

↑/+ key:Increases the data value

↓/- key:Decreases the data value

##### Example of Service Mode Menu Display

##### 3. Writing (Memorizing) the Adjustment Data

When the DEGAUSS key is pressed, "WRITE" will be displayed.

When released and pressed another time, \* will be displayed, indicating that the data has been memorized.

##### 4. Exiting the Service Mode

While pressing the DEGAUSS key, press the ENTER key to exit the service mode.

##### 5. FACTORY SET Mode (Values set at shipment)

"FACTORY SET" will be displayed when the DEGAUSS key is pressed for two seconds. It will executed when the DEGAUSS key is released and pressed again.

Note: When FACTORY SET is executed, the service item No. 199 **FACTORY FLAG** will become "0" (DONE). FACTORY SET can only be executed once. It need not be executed during servicing.

##### 6. Service Remote

All the data of the service mode except **FACTORY FLAG** can be written and read using a tool.

Note: When **FACTORY FLAG** is "0" (DONE), the service mode cannot be set by the service remote.

##### 3-1-2. Self-Diagnosis Functions

Malfunctions can be determined by the blinking of the REMOTE LED in this unit,

##### Main Reasons for Blinking of Remote LED

Once: ..... H OUT has stopped

Twice: ..... V OUT has stopped (Or no high voltage is output)

3 times: ..... HV PROTECTOR has operated

4 times: ..... IK PROTECTOR has operated

Or

+B overcurrent for HV OUT

5 times: ..... FAN has stopped or FAN has stopped due to stopping of HV. OUT circuit

6 times: ..... FC bus communication error (Non-volatile memory error)

7 times: ..... Other errors

\* The POWER LED does not light up or is dark.

Main Cause ..... 12V (from G board) fault

Main fuse disconnection 12V overload

\* The REMOTE LED does not light when set to the REMOTE MODE.

Cause ..... 5V (digital) fault

\* No images are displayed

The microprocessor has not been connected.

G2 is not set, etc.

Note: Defects of the high voltage circuit causes stopping of V.OUT.

Check the operations of the high voltage circuit by checking if the heater turns on when V OUT is stopped to determine the faulty location.

## 3-2. PREPARATIONS (2)

### 3-2-1. Equipment Used

#### 1. Signal generator

High vision :BTA S-001A (SMPTE 240M) specifications  
(Example of signal generator-Leader Electronic 440)  
:SMPTE 274M specifications

VG-814 :BTA1004 specifications  
(Note:ROM is required)  
(SMPTE 293M)  
:CCIR Rec-709 specifications  
(Note:ROM is required)  
:DXC-9000 VGA specifications  
(Note:ROM is required)

HD SDI : (SMPTE 240M/274M)  
(Example of signal generator-Shibasoku TG15B6)

2. Demagnetizer
3. Oscilloscope
4. Digital voltmeter

### 3-2-2. Adjustment Conditions

Note 1: When the CRT has been replaced, connect a DY to it, and determine the neck assembly position before performing adjustments.

2: The service mode will be exited when the power is turned off.

When turning ON the power again, perform service item No. 207 FACTORY PRESET, set service item No. 199 FACTORY FLAG to 1, and write the data (memorizing).

3: Make sure that LANDING is set to STD.  
(For 20inch, STD is set by setting PRESET.)

4: The No. 00  in the text indicates the service item No. and item name of the service menu.

5: Write the data (memorizing) each time after completing adjustments in the service mode. If the power is turned off without performing "WRITE" (memorize), all data will be lost. (Indicated as "WRITE" in this document.)

6: If the system and SCAN are the same, the data will be preserved on the RAM.

7: The U/S and N/S in the text indicate the under scan and normal scan.

#### 1. Settings

Set as follows unless where specified otherwise.

APERTURE :MIN  
BRIGHT :50% (Center click)  
CHROMA :50% (Center click)  
CONTRAST :80% (Center click)  
VOLUME :25% (Set to the 9 o'clock position)  
4:3 :N/S (Normal scan)

## 2. Setting the AC Voltage

120 ± 3V

Sliduck or NF power supply

Below 3% distortion rate, above 2.0A capacity

## 3. Signals Used

Signal		Details of Signal	Specification Level p-w
Component	HD	100% white (Y)	0.700 [V]
		75% white (Y)	0.525 [V]
	EDTV2 CCIR 274M	100% color (Pb, Pr) This item is peak-peak	0.700 [Vpp]
		75% color (Pb, Pr) This item is peak-peak	0.525 [Vpp]
R G B	HD	100% white	0.700 [V]
	EDTV2	(R, G, B)	
	CCIR 274M	75% white (R, G, B)	0.525 [V]

### Signal Names

HD :BTA S-001A (SMPTE 240M) specifications  
(1125/59-94, 60 Hz-2 :1)  
:SMPTE 274M specifications

EDTV2 :BTA T-1004 specifications (SMPTE 293M)  
(525/59-94 Hz 1: 1)

CCIR :Rec-709 specifications  
(1250/50 Hz 2:1)

### Matrix Ratio

HD :BTA S-001A specifications  
Y=0.212R+0.701G+0.087B

EDTV2 :BTA T-1004 specifications (SMPTE 293M)  
Y=0.299R+0.587G+0.114B

CCIR :Rec-709 specifications  
/274M Y=0.213R+0.715G+0.072B

### 3-3. LANDING ADJUSTMENTS

#### 3-3-1. Landing Rough Adjustment

1. To decrease the effects of earth magnetism, face the CRT of the unit towards the east or west.
  2. Set CONTRAST to MAX.  
BRIGHT: Set so that the screen can be clearly seen.
  3. Input the DXC-9000 green signal to receive images.
  4. Loosen the DY tightening fixture and move back the DY.
  5. Turn ON the power supply to demagnetize.
- Note: If AC is 60 Hz, set the unit to free-running and demagnetize.

6. Adjust the purity Mg so that the green raster comes to the center of the screen. Equalize R and B.

Note: Set the 6-multiple pole and 4-multiple pole Mg (14inch) of the DY and 6-multiple pole Mg of the neck assembly to offset.

6-multiple pole Mg  
60°

4-multiple pole Mg  
90°

Adjust the boss.  
(OFFSET state)

7. Move the DY forward gradually, and adjust so that the whole screen becomes green.
8. Check the B and R signals also. Perform step 7 again if the screen is not in green alone.
9. Adjust the tilt of the DY.
10. Tighten the DY tightening fixture lightly.
11. Return CONTRAST and BRIGHT to the center click.

#### 3-3-2. Landing Fine Adjustment

1. Adjust landing to 120 nit using the DXC-9000 all white signal and 4:3 N/S 104% overscanning, and then cool down.
2. Perform aging of the unit for about 30 minutes.
3. Input the DXC-9000 green signal to receive images, and set CONTRAST to MAX.
4. Demagnetize the whole unit and then the CRT screen.
5. Attach the wobbling coil to the CRT neck assembly.  
(Polarity at which the temperature drift at the top left becomes negative with time.)
6. Adjust the DY position, purity, DY tilt center, and landing at the four corners using the landing checker.

Adjust the L/D adjustment value 30 minutes after the power is turned ON as follows. (Target)

<Specification>

Note :  
Adjust so that the aging time become 30 minutes exactly.  
(Do not adjust more than 1 hour.)

Adjust the green of each corner, ① to ④, and center ⑥ to  $\pm 5$  mm, set the red and blue to less than  $\pm 7$  mm of green, and the difference between red and blue to less than  $\pm 10$  mm.

For ⑤ and ⑦, adjust green to less than  $\pm 10$  mm, red and blue to less than  $\pm 7$  mm of green, and the difference between red and blue to less than  $\pm 10$  mm.

7. Tighten the DY tightening fixture temporarily.

8. For vertical and horizontal swivels, rotate the DY neck and insert a wedge so that the left and right sides of the horizontal trapezoid of the upper and lower pins become equivalent. Be sure to insert the wedge properly so that the DY does not shake.

9. Check the landing at each corner, and if it does not meet the specifications, paste a disk magnet to the funnel and adjust.

Note 1: Paste the disk magnet about 80 to 100 mm from DY diagonally.

- 2: When using a disk magnet, perform degaussing and check the landing.

Use less than 4 disk magnets, one for each corner.

10. Remove the wobbling coil.
11. Check that the color purity is good for each color R, G, and B.
12. Check that there is no DY tilt, tighten the DY tightening tool completely, and fix the purity MG using a white adhesive.

### 3-4. FOCUS ADJUSTMENT

1. Input the HD monoscope signal N/S to receive images.
2. Set CONTRAST:MAX and BRIGHT to the center click.
3. Focus the vertical line exactly using V FOCUS (FBT (T3003) FOCUS 1, upper side on board A).
4. Focus the horizontal line exactly using H FOCUS (FBT (T3003) FOCUS 2, lower side on board A).
5. Perform tracking of the 14inch, and adjust the focus of the whole screen to optimum.

6. Perform tracking so that the shape of the "0" of the "400" and "1200" numbers become optimum.
7. Display the menu, and check that the focus is optimum on the menu (high contrast signal).
8. Input the DXC-9000 4:3 N/S cross-hatch signal and receive images. If the horizontal lines at the top and bottom of the screen appear distorted, rotate the FOCUS in the clockwise direction slowly to reduce the distortion.

Note: Be careful not to reduce the distortion excessively as this will aggravate the focus at the center.

9. Check that the focus is satisfactory at the "400" and "1200" numbers, center and menu character. If bad, return to step 8 and check again.
10. Return CONTRAST to center click.

### 3-5. CONVERGENCE ADJUSTMENT

#### 3-5-1. Convergence Rough Adjustment

1. Input the DXC-9000 dot signal to receive images.
2. Adjust CONTRAST to a level at which the screen is the clearest. Set BRIGHT to MIN.
3. Overlap the 6-multiple pole Mg bosses of the CRT neck assembly. (14inch, 20inch)  
Adjust the 6-multiple pole Mg and 4-multiple pole Mg bosses of the DY. (14inch)

4. Adjust the convergence in the H direction roughly using H.STAT. (RV801 of C board)

5. Adjust the convergence in the V direction roughly using V.STAT. (RV901 of P board)

#### 3-5-2. Convergence Rough Adjustment (20inch)

1. Demagnetize the whole unit using a demagnetizer.
2. Input the DXC-9000 cross-hatch signal to receive images.
3. Set the 4:3 mode, and return BRIGHT and CONTRAST to the center click.
4. Rotate H.STAT (RV801 of C board) and V.STAT (RV901 of P board) to make all three lines R, G, and B parallel.
5. Rotate the 6-pole Mg of the neck assembly and adjust so that the distance between R and G and that between B and G become equal both horizontally and vertically.

Correct the static convergence by changing the angle Q1 between the two knobs A and B and the tilt Q2.

6. Return H.STAT and V.STAT to their original settings, and set the misconvergence at the center of the screen to zero.
7. Adjust TLV.
8. Rotate the XBV reactor and adjust the XBV misconvergence to zero.  
Rotate the XCV reactor and adjust the XCV misconvergence.

Note: If the XBV has been corrected, adjust V.STAT again.

If the XCV cannot be adjusted any further, move the DY up and down to adjust XCV.

9. Rotate the APH reactor and adjust the H.AMP misconvergence.
10. Rotate the TLH reactor and adjust the H.TILT misconvergence.

Note: If the TLH has been corrected, adjust H.STAT again.

11. Adjust the YBH misconvergence using YBH.
12. Adjust the YCH misconvergence using YCH.

Note: If the horizontal trapezoid does not satisfy the specified value, perform tracking with the right and left swivels of the DY.

TLV •••• V. TILT

XCV •••• V. X. CROSS

XBV •••• V. X. BOW

APH •••• H. AMP

TLH •••• H. TILT

YCH •••• H. Y. CROSS

YBH •••• H. Y. BOW

13. Check the convergence of the overall screen, and if necessary, adjust H.STAT (RV801 of C board), perform other adjustments, and correct the permalloy.

#### Convergence Adjustment Specifications

A zone 0.40 mm  
B zone 0.48 mm  
(When no cavitation)

14. Check the convergence of the overall screen, and check that the reverse hatch is not affected by the luminance.
15. Fix XBV, XCV, APH, TLH, and two 6-pole Mg using white adhesive.
16. Fix the DY spacer and permalloy assembly using RTV.

Note: Make sure that the white adhesive sufficiently covers the DY, DY spacer, and funnel.

17. Fix V.STAT (RV901 of P board) using white adhesive.

Note: Apply a small amount of white adhesive on the outside so that it does not go inside the control.

#### 3-5-3. Convergence Fine Adjustment (14inch)

1. Demagnetize the whole unit using a demagnetizer.
2. Input the DXC-9000 cross-hatch signal to receives images.
3. Set the 4:3 mode, and return CONTRAST and BRIGHT settings to the center click.
4. Rotate H.STAT (RV801 of C board) and V.STAT (RV901 of P board) to make all three lines R, G, and B parallel.
5. Rotate the 6-pole Mg of the neck assembly and adjust so that the distance between R and G and that between B and G become equal both horizontally and vertically.

Correct the static convergence by changing the angle Q1 between the two knobs A and B and the tilt Q2.

Note: Set the 4-pole and 6-pole of the DY to offset and do not touch them thereafter. (Do not use them thereafter).

6. Return H.STAT and V.STAT to their original settings, and set the misconvergence at the center of the screen to zero.
7. Adjust TLV.

Note: If the horizontal trapezoid does not satisfy the specified value, perform "Landing Adjustments" again.

8. Adjust TH (XCV).

Note: If the XCV cannot be adjusted any further, perform "Landing Fine Adjustment" again and move the DY up and down.

9. If the H.TILT is misconverged, insert the TLH correction plate into DY and adjust the insertion amount. Perform this for the left and right sides separately, and check that the H.TILT is not affected.

Note: If the TLH correction plate was inserted into the DY, adjust H.STAT again.

10. Adjust the YCH misconvergence using YCH.

Note: If the horizontal trapezoid does not satisfy the specified value, perform tracking with the right and left swivels of the DY.

TLV ..... V. TILT

XCV ..... V. X. CROSS

TLH ..... H. TILT

YCH ..... H. Y. CROSS

11. Check the convergence of the overall screen, and if necessary, adjust H.STAT (RV801 of C board), perform other adjustments, and correct the permalloy.

#### Convergence Adjustment Specifications

12. Check the convergence of the overall screen, and check that the reverse hatch is not affected by the luminance.
13. If a TLH correction plate is inserted, fix using a white adhesive.
14. Fix the DY spacer and permalloy assembly using RTV.

Note: Make sure that the white adhesive sufficiently covers the DY, DY spacer, and funnel.

15. Fix the 6-pole Mg of the neck assembly and 6-pole Mg of the DY using white adhesive.

16. Fix V.STAT (RV901 of P board) using a white adhesive.

Note: Apply a small amount of white adhesive on the outside so that it does not go inside the control.

### 3-6. IMAGE DISTORTION ADJUSTMENTS

When carrying out preparations, replacing the CRT, and adjust the image distortion, in order to release the blanking, set all the H.BLK and V.BLKB to 00 in the service mode, and perform adjustments after setting V.BLKT to 255.

#### 3-6-1. Image Distortion Rough Adjustment

1. Input the HD cross-hatch signal to receive images.
2. Set No. 196 **1080 SELECT** to "0" and set the 1035 mode in the N/S, and set the service mode.
3. Adjust the image distortion roughly in the following conditions.
 

No. 3	<b>H.SIZE</b>
No. 4	<b>H.CENTER</b>
No. 10	<b>V.SIZE</b>
No. 8	<b>H.PIN</b>
No. 6	<b>H.KEY</b>

Specifications for BTA1125 N/S mode

Horizontal:  $18.7 \pm 0.2$  frames

Vertical:  $10.5 \pm 0.2$  frames

However, for a hatch of 20 horizontal blocks and 11.25 vertical blocks:

(V.SIZE specifications when no 16:9 mask)

20inch:235 mm

14inch:161 mm

4. Write the data.
5. Exit the service mode.
6. Input the DXC-9000 cross-hatch signal to receive images.
7. Set No. 194 **16:9 SELECT** to "0" and set the 4:3 mode in the N/S, and set the service mode.
8. Adjust the image distortion roughly in the following conditions.
 

No. 62	<b>H.SIZE</b>
No. 63	<b>H.CENTER</b>
No. 69	<b>V.SIZE</b>
No. 67	<b>H.PIN</b>
No. 65	<b>H.KEY</b>

Specifications for DXC-9000 4:3, N/S mode

Horizontal:  $(15.7 \pm 0.2)$  frames

Vertical:  $(10.4 \pm 0.2)$  frames

Note ( ) indicates values when VG-814 hatch is used

9. Write the data.

### 3-6-2. Image Distortion Fine Adjustment

Note 1: Perform the adjustments after power conduction for more than 5 minutes.

Note 2: Demagnetize the whole unit using a demagnetizer

#### (1) HD 1080 U/S adjustment

1. Input the HD cross-hatch signal to receive images.
2. Set the U/S mode, set CONTRAST to MIN and BRIGHT to MAX, and light up the raster.
3. Set No. 196 **[1080 SELECT]** to "1", and set the 1080 mode.
4. Set the service mode.
5. Adjust to satisfy the specifications in the following conditions.

No. 5	<b>[H. PHASE]</b>
No. 33	<b>[ATV 1080 N/S V. PHASE]</b>
No. 18	<b>[H. SIZE]</b>
No. 19	<b>[H. KEY]</b>
No. 20	<b>[H. KEY. BAL]</b>
No. 37	<b>[ATV 1080 U/S H. PIN]</b>
No. 22	<b>[H. PIN. BAL]</b>
No. 36	<b>[ATV 1080 U/S V.SIZE]</b>

\* Adjust H.PHASE so that the left and right raster of the image becomes equivalent.

To adjust H.PHASE, set the YPBPR mode (absolute), set CHROMA to MAX, adjust the green line on the left edge so that it becomes clear, and adjust so that A (width of green line and left edge of screen) becomes equal to A (width of right edge of raster and right edge of image).

\* To adjust V. PHASE, decrease the data by 5 after the topmost line of the image becomes visible and write the data. The data should not be less than 110.

#### Specifications for HD 1080 U/S mode

20inch	:H.SIZE .....	369 ± 2 mm
	:V.SIZE .....	208 ± 2 mm
14inch	:H.SIZE .....	254 ± 2 mm
	:V.SIZE .....	143 ± 2 mm

Note 1: KEY and PIN can be adjusted more quickly if adjusted after H.SIZE and V.SIZE.  
(For whole system)

Note 2: Adjust in the order of U/S and N/S for all the modes.  
As blanking is imposed in N/S, the H.PHASE and V.PHASE cannot be adjusted if U/S is adjusted after N/S.

6. Write the data.

#### (2) HD 1080 N/S adjustment

1. Input the HD cross-hatch signal to receive images.
2. Set the N/S mode.
3. Set CONTRAST to MAX, and BRIGHT to MIN, and light up the black level.
4. Adjust to satisfy the specifications in the following conditions.

No. 3	<b>[H.SIZE]</b>
No. 4	<b>[H.CENTER]</b>
No. 6	<b>[H.KEY]</b>
No. 7	<b>[H.KEY.BAL]</b>
No. 34	<b>[ATV 1080 N/S H. PIN]</b>
No. 9	<b>[H.PIN.BAL]</b>
No. 32	<b>[ATV 1080 N/S V.SIZE]</b>
No. 31	<b>[ATV 1080 N/S V.CENTER]</b>
No. 13	<b>[V.LIN.BAL (16:9)]</b>
No. 14	<b>[V.LIN (16:9)]</b>

#### Specifications for HD 1080 N/S mode

20inch	H.SIZE.....	18.7 ± 0.2 frames
	V.SIZE.....	10.9 ± 0.2 frames
		(235 ± 2 mm when no 16:9 bezel)
14inch	H.SIZE.....	18.7 ± 0.2 frames
	V.SIZE.....	10.9 ± 0.2 frames
		(161 ± 2 mm when no 16:9 bezel)

Note 1: Adjust V.LIN.BAL and V.LIN by tracking.

Note 2: Do not move H.PHASE and V.PHASE after adjusting using U/S.

Adjust the balance of the left and right sides of the screen using H.CENTER and the balance of the top and bottom of the screen using V.CENTER.

5. Write the data.
6. Adjust No. 13 **[V.LIN.BAL (16:9)]** so that the height at the top half and bottom half of the screen becomes equal.

Decrease V.SIZE if necessary.

If the top is longer: Press the ↓/- key.

If the bottom is longer: Press the ↑/+ key.

7. Adjust No. 14 **[V.LIN. (16:9)]** so that the height of one frame in the vertical direction at the top and that of one frame in the vertical direction at the center become equal.

If the frame at the center is small: Press the ↑/+ key.

If the frame at the center is large: Press the ↓/- key.

8. Write the data.

### (3) HD 1080 blanking adjustment

1. Input the HD cross-hatch signal N/S mode to receive images.
2. Remove the 16:9 mask, adjust No. 35 **V.BLKB** if the 3-value SYNC is visible at the bottom of the screen until it becomes hidden, and increase the data by 1 and write it.
3. Set the U/S mode. Adjust No. 38 **V.BLKB** until the 3-value SYNC at the bottom of the screen becomes hidden, and increase the data by 1 and write it.
4. Set the U/S mode to the YPB PR mode and CHROMA to MAX.
5. Adjust the blanking at the left side of the image using No. 15 **H.BLK**.

Add another 5 when the green line on the left side becomes hidden (Refer to 3-6-2. H.PHASE Adjustment.), and write the data.

Note: Take note that the green line must be hidden, but if blanking is imposed excessively, the left side may be chipped during the RGB mode.

6. Return CHROMA to the center click.

### (4) HD 4:3 area marker adjustment

1. Input the HD monoscope signal to receive images.  
Display the 4:3 area marker in the U/S.
2. Adjust No. 29 **4:3 MARKER LEFT**.  
Adjust so that the right side of the green line of the marker (left) touches the tip of the triangular mark at the number "4".
3. Adjust No. 30 **4:3 MARKER RIGHT**.  
Adjust so that the left side of the green line of the marker (right) touches the tip of the triangular mark at the number "4".

4. Erase the 4:3 area marker.

### (5) HD (1035) U/S adjustment (SMPTE 240M)

1. Set No. 196 **1080 SELECT** to "0", and set the 1035 mode.
2. Input the HD1035 cross-hatch signal to receive images.
3. Adjust No. 12 **V.PHASE** (BTA1125, 16:9 N/S), adjust so that the width of the raster extending to the edges of the top and bottom images become equal.
4. Set the U/S mode, adjust No. 23 **V.SIZE** and No. 21 **H.PIN**, and write the data.

Specifications for BTA1125 16:9, U/S V.SIZE

20inch: 208 ± 2 mm

14inch: 143 ± 2 mm

### (6) HD (1035) N/S adjustment

1. Set the N/S mode. Adjust No. 11 **V.CENTER**, No. 10 **V.SIZE**, No. 8 **H.PIN**, and write the data.

Specifications for HD 1035 16:9, N/S V.SIZE

20inch : 10.5 ± 0.2 frames

(235 ± 2 mm when no 16:9 masking)

14inch : 10.5 ± 0.2 frames

(161 ± 2 mm when no 16:9 masking)

### (7) HD (1035) blanking adjustment

1. Input the HD1035 monoscope signal to receive images.
2. Set the N/S mode.
3. Adjust the blanking at the top the screen using No. 16 **V.BLKT**.  
Add 10 to the data in which blanking is hidden in the top side of 16:9 mask, and write the data.
4. Adjust the blanking at the bottom the screen using No. 17 **V.BLKB**.  
Subtract 10 from the data in which blanking is hidden in the bottom side of 16:9 mask, and write the data.
5. Set the U/S mode.
6. Adjust No. 26 **V.BLKB**, add +6 to the data at which the bottom 3-value SYNC becomes hidden, and write the data.

Note: Do not change V.PHASE after adjusting in the U/S mode.  
Adjust the balance at the top and bottom in the N/S mode using V.CENTER.

### (8) CRT display adjustment

1. Input the high vision (1035) monoscope signal to receive images.
2. Set the N/S mode.
3. Set No. 209 **ALL OSD DISPLAY** to "1" to display OSD on the whole display.
4. Adjust No. 185 **OSD DA** (adjust the size of the characters so that all characters fit the screen, and there is space about the size of one character on the right side. If the value is 0 and the characters cannot be made any smaller, use 0 as the adjustment value), and write the data.

Note 1: As the hardware cannot catch up with the OSD, DA immediately, wait for some time after changing the data.

Note 2: Defects can be suspected if the characters cannot be made any smaller, and the second character from the right is chipped.

5. Set No. 209 **ALL OSD DISPLAY** to "0", write the data, and exit the service mode.

### (9) EDTV2 (SMPTE 293M) U/S adjustment

1. Input the high vision monoscope signal to receive images.
2. Set to U/S, and set CONTRAST to MIN, and BRIGHT to MAX to light up the raster.
3. Set the 16:9/4:3 mode, 16:9 mode, and U/S mode.
4. Set the serviceman mode.
5. Adjust to satisfy the specifications in the following conditions.

No. 42	<b>H.PHASE</b>
No. 49	<b>V.PHASE</b>
No. 53	<b>H.SIZE</b>
No. 54	<b>H.KEY</b>
No. 55	<b>H.KEY.BAL</b>
No. 56	<b>H.PIN</b>
No. 57	<b>H.PIN.BAL</b>
No. 58	<b>V.SIZE</b>

- \* Adjust H.PHASE so that the left and right raster of the image becomes equivalent. To adjust H.PHASE, set the YPBPR mode (absolute), set CHROMA to MAX, adjust the green line on the left edge so that it becomes clear, and adjust so that A (width of green line and left edge of screen) becomes equal to A (width of right edge of raster and right edge of image).
- \* Adjust V.PHASE so that the left and right raster of the image becomes equivalent.

Specifications for high vision EDTV 2 16:9 U/S mode

20inch	H.SIZE.... $369 \pm 2$ mm
	V.SIZE.... $208 \pm 2$ mm
14inch	H.SIZE.... $254 \pm 2$ mm
	V.SIZE.... $143 \pm 2$ mm

Note 1: KEY and PIN can be adjusted more quickly if adjusted after H.SIZE and V.SIZE.  
(For whole system)

Note 2: Adjust in the order of U/S and N/S for all the modes.  
As blanking is imposed in N/S, the H.PHASE and V.PHASE cannot be adjusted if U/S is adjusted after N/S.

6. Write the data.

### (10) EDTV2 (SMPTE 293M) N/S adjustment

1. Input the high vision cross-hatch signal to receive images.
2. Set the N/S mode.
3. Set CONTRAST to MAX, and BRIGHT to MIN, and light up the black level.
4. Adjust to satisfy the specifications in the following conditions.

No. 40	<b>H.SIZE</b>
No. 41	<b>H.CENTER</b>
No. 43	<b>H.KEY</b>
No. 44	<b>H.KEY.BAL</b>
No. 45	<b>H.PIN</b>
No. 46	<b>H.PIN.BAL</b>
No. 47	<b>V.SIZE</b>
No. 48	<b>V.CENTER</b>

Specifications for high vision EDTV2 16:9 N/S mode

20inch	H.SIZE.... $18.7 \pm 0.2$ frames ( $15.7 \pm 0.2$ )
	V.SIZE.... $10.5 \pm 0.2$ frames
	( $235 \pm 2$ mm when no 16:9 mask)
14inch	H.SIZE.... $18.7 \pm 0.2$ frames ( $15.7 \pm 0.2$ )
	V.SIZE.... $10.5 \pm 0.2$ frames
	( $161 \pm 2$ mm when no 16:9 mask)

Note 1: Adjust V.LIN.BAL and V.LIN by tracking.

Note 2: Do not move H.PHASE and V.PHASE after adjusting using U/S.

Adjust the balance of the left and right sides of the screen using H.CENTER and the balance of the top and bottom of the screen using V.CENTER.

5. Write the data.
6. Adjust No. 13 V.LIN.BAL (16:9) so that the height at the top half and bottom half of the screen becomes equal.

Note: Decrease V.SIZE if necessary.

If the top is longer: Press the  $\downarrow/-$  key.

If the bottom is longer: Press the  $\uparrow/+$  key.

7. Adjust No. 14 V.LIN (16:9) so that the height of one frame in the vertical direction at the top and that of one frame in the vertical direction at the center become equal.  
If the frame at the center is small: Press the  $\uparrow/+$  key.  
If the frame at the center is large: Press the  $\downarrow/-$  key.

8. Write the data.

### (11) EDTV2 (SMPTE 293M) U/S blanking adjustment

1. Input the high vision monoscope signal to receive images.
2. Adjust the blanking at the top of the screen using No. 16 **V.BLK.T**.  
Add 10 to the data in which blanking is hidden at the top of the 16:9 mask, and write the data.
3. Adjust the blanking at the bottom of the screen using No. 17 **V.BLK.B**.  
Subtract 10 from the data in which blanking is hidden at the bottom of the 16:9 mask, and write the data.
4. Set to U/S.
5. Adjust the blanking at the left side of the image using No. 50 **EDTV2 N/S H.BLK**.  
Scroll up the data and when the blanking comes to the left side of the image, scroll the data down until no blanking is imposed, subtract 20 from the data and write the data.  
If the left edge is not hidden, set the data to 255.
6. Adjust the blanking at the bottom of the screen with No. 51, 60 **V.BLK.T**=255 (fixed), No. 52, 61 **B.NLK.B**.  
Adjust so that the bottom 3-value SYNC becomes hidden, add 5 to the hidden data, and write the data. (Clear the 16:9 mask first.)

### (12) DXC-9000 U/S adjustment

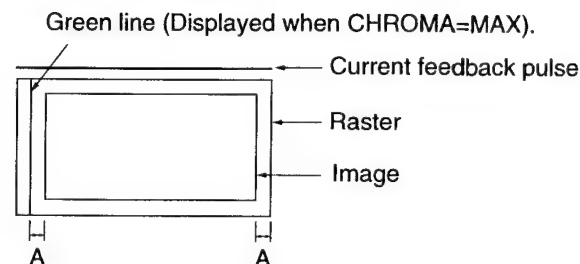

1. Input the high vision cross-hatch signal to receive images.
2. Set to U/S, and set CONTRAST to MIN and BRIGHT to MAX to light up the raster.
3. Set the 4:3 mode in the 16:9/4:3 menu.
4. Set the service mode. (Refer to 3-1-1. Service Mode.)
5. Adjust to satisfy the specifications in the following conditions.
 

No. 64	<b>H.PHASE</b>
No. 71	<b>V.PHASE</b>
No. 75	<b>H.SIZE</b>
No. 76	<b>H.KEY</b>
No. 77	<b>H.KEY.BAL</b>
No. 78	<b>H.PIN</b>
No. 79	<b>H.PIN.BAL</b>
No. 80	<b>V.SIZE</b>

#### Specifications for DXC-9000 4:3 U/S mode

20inch	H.SIZE .... 369 ± 2 mm
	V.SIZE .... 278 ± 2 mm
14inch	H.SIZE .... 254 ± 2 mm
	V.SIZE .... 190 ± 2 mm

- \* Adjust H.PHASE so that the raster at the left and right of the image becomes equal. To adjust H.PHASE, set the YPBPR mode (absolute), set CHROMA to MAX, adjust the green line on the left edge so that it becomes clear, and adjust so that A (width of green line and left edge of screen) becomes equal to A (width of right edge of raster and right edge of image).
- \* Adjust V.PHASE so that the left and right raster of the image becomes equivalent.

6. Write the data.

### (13) DXC-9000 N/S adjustment

1. Input the high vision cross-hatch signal to receive images.
2. Set the N/S mode.
3. Set CONTRAST to MAX, and BRIGHT to MIN, and light up the black level.
4. Adjust to satisfy the specifications in the following conditions.
 

No. 27	<b>V.LIN.BAL (4:3)</b>
No. 28	<b>V.LIN (4:3)</b>
No. 62	<b>H.SIZE</b>
No. 63	<b>H.CENTER</b>
No. 65	<b>H.KEY</b>
No. 66	<b>H.KEY.BAL</b>
No. 67	<b>H.PIN</b>
No. 68	<b>H.PIN.BAL</b>
No. 69	<b>V.SIZE</b>
No. 70	<b>V.CENTER</b>

#### Specifications for DXC-9000 4:3 N/S mode

20inch	H.SIZE .... 18.7 ± 0.2 frames
	V.SIZE .... 14.0 ± 0.2 frames
14inch	H.SIZE .... 18.7 ± 0.2 frames
	V.SIZE .... 14.0 ± 0.2 frames

Note 1: Adjust V.LIN.BAL and V.LIN by tracking

Note 2: Do not move H.PHASE and V.PHASE after adjusting using U/S.

Adjust the balance of the left and right sides of the screen using H.CENTER and the balance of the top and bottom of the screen using V.CENTER.

5. Write the data.

#### (14) DXC-9000 blanking adjustment

1. Input the high vision monoscope signal to receive images.
2. Adjust the blanking at the top of the screen using No. 82 **V.BLK.T**. Add 5 to the data in which blanking is hidden at the top of the 16:9 mask, and write the data.
3. Adjust the blanking at the bottom of the screen using No. 83 **V.BLK.B**. Subtract 10 from the data in which blanking is hidden at the top of the 16:9 mask, and write the data.
4. Set the U/S mode.
5. Adjust the blanking at the left side of the image using No. 72 **H.BLK**. Scroll up the data and when the blanking comes to the left side of the image, scroll the data down until no blanking is imposed, subtract 20 from the data, and write the data.
6. Adjust the blanking at the bottom of the screen with No. 73 **V.BLK.T** and No. 74 **V.BLK.B**. Adjust so that the bottom 3-value SYNC becomes hidden, add 6 to the hidden data, and write the data. (Clear the 16:9 mask first.)

#### (15) DXC-9000 N/S HD/VD mode phase adjustment

1. Set the DXC-9000 N/S HD/VD mode.
2. Receive the images of DXC-9000 in the HD/VD mode, adjust No. 84 **H.PHASE** and No. 85 **V.PHASE** so that the image phase is synchronized with internal sync.
3. Write the data.

Note: Take note that the HD/VD signal output from VG-814 is output from the multi-connector and not BNC (HS, VS).

#### (16) FREE-RUN (NO SYNC) U/S adjustment

1. Set to the NO SYNC state by eliminating the signals.
2. Set the 16:9 mode and U/S mode at the 16:9/4:3 menu.
3. Adjust using No. 132 **V.CENTER** and No. 136 **V.SIZE**.

Specifications for FREE-RUN 16:9 U/S **V.SIZE**

20inch..... 208 ± 2 mm  
14inch..... 143 ± 2 mm

Adjust **V.CENTER** so that it comes to the 16:9 vertical center.

4. Write the data.

#### (17) FREE-RUN (NO SYNC) N/S adjustment

1. Set the N/S mode.
2. Adjust using No. 135 **V.SIZE**, and write the data.

Specifications for FREE-RUN 16:9 N/S **V.SIZE**

20inch..... 235 ± 2 mm (perform without 16:9 masking)  
14inch..... 161 ± 2 mm (perform without 16:9 masking)

#### (18) FREE-RUN (NO SYNC) 4:3 adjustment

1. Set the 4:3 mode and U/S mode at the 16:9/4:3 menu.
  2. Adjust using No. 134 **V.SIZE**, and write the data.
- Note: Fix at No. 130 **H.PHASE** and No. 133 **V.PHASE**.

Specifications for FREE-RUN 4:3 U/S **V.SIZE**

20inch..... 278 ± 2 mm  
14inch..... 190 ± 2 mm

#### (19) FREE-RUN (NO SYNC) 4:3 N/S adjustment

1. Set to N/S.
2. Adjust using No. 131 **V.SIZE**, and write the data.

Specifications for FREE-RUN 4:3 N/S **V.SIZE**

Add another 15 to the **V.SIZE** of the data at which the raster is hidden at the top and bottom bezel

#### (20) 1250 adjustment

1. Set the 16:9 mode and N/S mode at the 16:9/4:3 menu to receive 1250 images.
2. Copy the (10) EDTV2 N/S adjustment data. (The ( ) shows the service item No. of the copy source.)

No. 86	<b>H.SIZE</b>	(No. 40)
No. 87	<b>H.CENTER</b>	(No. 41)
No. 88	<b>H.PHASE</b>	=142 (Fixed)
No. 89	<b>H.KEY</b>	(No. 43)
No. 90	<b>H.KEY.BAL</b>	(No. 44)
No. 91	<b>H.PIN</b>	(No. 45)
No. 92	<b>H.PIN.BAL</b>	(No. 46)
No. 93	<b>V.SIZE</b>	(No. 47)
No. 94	<b>V.CENTER</b>	(No. 48)
No. 95	<b>V.PHASE</b>	=186 (Fixed)
No. 96	<b>H.BLK</b>	=00 (Fixed)
No. 97	<b>V.BLKY</b>	=255 (Fixed)
No. 98	<b>V.BLKB</b>	=00 (Fixed)

3. Write the data.
4. Set the U/S mode to receive 1250 images.
5. Copy the adjustment data of the EDTV2 mode U/S. (The ( ) shows the service item No. of the copy source.)

No. 99	<b>H.SIZE</b>	(No. 53)
No. 100	<b>H.KEY</b>	(No. 54)
No. 101	<b>H.KEY.BAL</b>	(No. 55)
No. 102	<b>H.PIN</b>	(No. 56)
No. 103	<b>H.PIN.BAL</b>	(No. 57)
No. 104	<b>V.SIZE</b>	(No. 58)
No. 106	<b>V.BLKT</b>	=255 (Fixed)
No. 107	<b>V.BLKB</b>	=00 (Fixed)

Copy and write the U/S data.

### (21) 625pr adjustment

1. Set the 4:3 N/S mode to receive 625pr images.
2. Copy the adjustment data of DXC-9000 N/S.

(The ( ) shows the service item No. of the copy source.)

No. 108	<b>H.SIZE</b>	(No. 62)
No. 109	<b>H.CENTER</b>	(No. 63)
No. 110	<b>H.PHASE</b>	=170 (Fixed)
No. 111	<b>H.KEY</b>	(No. 65)
No. 112	<b>H.KEY.BAL</b>	(No. 66)
No. 113	<b>H.PIN</b>	(No. 67)
No. 114	<b>H.PIN.BAL</b>	(No. 68)
No. 115	<b>V.SIZE</b>	(No. 69)
No. 116	<b>V.CENTER</b>	(No. 70)
No. 117	<b>V.PHASE</b>	=192 (Fixed)
No. 118	<b>H.BLK</b>	=00 (Fixed)
No. 119	<b>V.BLKT</b>	=255 (Fixed)
No. 120	<b>V.BLKB</b>	=00 (Fixed)

3. Write the data.
4. Set the 4:3 U/S mode to receive 625pr images.
5. Copy the DXC-9000 U/S adjustment data.

(The ( ) shows the service item No. of the copy source.)

No. 121	<b>H.SIZE</b>	(No. 75)
No. 122	<b>H.KEY</b>	(No. 76)
No. 123	<b>H.KEY.BAL</b>	(No. 77)
No. 124	<b>H.PIN</b>	(No. 78)
No. 125	<b>H.PIN.BAL</b>	(No. 79)
No. 126	<b>V.SIZE</b>	(No. 80)
No. 128	<b>V.BLKT</b>	=255 (Fixed)
No. 129	<b>V.BLKB</b>	=0 (Fixed)

6. Write the data.

### (22) Image distortion adjustment check

Check that the adjustment is carried out in the proper order or blanking may be imposed, the phase may be deviated, etc.

1. Set the 4:3, N/S mode.
2. Input the signals in the order of DXC-9000, 625pr, and 6253D, and check that these are received.  
Check that DXC-9900 does not change phase in the HD/VD mode.
3. Set the 4:3, U/S mode.
4. Input the DXC-9000 signal, and check that the image does not chip (check if the image is in blank or hidden by bezel), images can be received.
5. Set the 16:9, N/S mode. (Set the 16:9 mask.)
6. Input the signals in the order of 1125, EDTV2, 1250, and check that images can be received.
7. Set the 16:9, U/S mode. (Set the 16:9 mask.)
8. Input the 1125 and EDTV2 signals, and check that the image does not chip, and images can be received at the appropriate phase.
9. Set No. 196 **1080 SELECT** to "1", write the data, and check in the same way as above for the high vision (1080) N/S and U/S modes.
10. Connect the HD SDI kit, input the high vision signal (1035) and high vision (1080) signal in the U/S mode by HD SDI respectively, and check that the monitor automatically determines the 1035/1080 signal, receives it, and displays it without image chipping at the appropriate phase.

Note: When No. 197 **SYSTEM DISPLAY** is set to 1, the current system will be displayed at the bottom left of the screen.

### 3-7. WHITE BALANCE ADJUSTMENT AND FINAL ADJUSTMENT

#### 3-7-1. G2 Adjustment

1. Input the all white HD component (100IRE) signal.
2. Set CONTRAST and BRIGHT to MAX (so that ABL is imposed).
3. Connect the probe of the oscilloscope to TP22 (IK) of the A board.
4. Set the service mode.
5. Adjust using No. 1 **[G2]**.

Raise G2 and adjust it 4 steps above the data of the first point at which the amplitude of all three pulses observed saturate.

 ← When G2 is low.

 ← When G2 is raised, the amplitude of the three pulses become larger.

 ← Adjust to 4 steps above the data at which the amplitude of all three pulses observed do not increase even when G2 is raised.

(Note)

When saturated, the amplitude of the pulse will not change even if G2 is raised.

6. Write the data.

#### 3-7-2. White Balance Adjustment

1. Input the all white HD RGB signal to receive images. Perform aging for more than 30 minutes.
2. After aging, input the 10-step or 20-step gray scale HD RGB signal, and receive images.
3. Set CONTRAST to MIN and BRIGHT to center click.
4. Check that 6500K is selected for the color temperature of MENU. If other values are selected, set the COLOR TEMP SELECT/ADJ screen, and set to 6500K.
5. Set the service mode. Adjust using No. 180 SUB BRIGHT.

In the 10-step or 20-step gray-scale

0IRE → CUT OFF

5IRE → Adjust so that the screen slightly lights up.

6. Write the data.
7. Input the all white HD RGB signal (100IRE), and receive the images.
8. Set CONTRAST and BRIGHT to the center click.
9. Adjust the SUB CONTRAST of the 16:9 N/S mode using No. 183 **[SUB CONTRAST]**.

All white 100 IRE luminance  $145 \pm 5$  **[nit]**

10. Adjust the luminance of the all white signal so that the luminance of the screen becomes 3 (NIT).

Note: Do not change CONTRAST and BRIGHT when adjusting the luminance to 3 (NIT) at 9.

11. Adjust 6500K RED BIAS using No. 168 **[R.B]** and 6500K BLUE BIAS using No. 170 **[B.B]**, and adjust the 6500K white balance (cutoff side).

Specification: 6500K+8MPCD

Adjust cutoff by 3 **[nit]**

Note: Fix GREEN and do not change it.

12. Write the data.
13. Set the luminance of the all white signal to 100 IRE.
14. Adjust 6500K RED GAIN using No. 171 **[R.G]** and 6500K BLUE GAIN using No. 173 **[B.G]**, and adjust the 6500K white balance (highlight side).

Note: Fix GREEN and do not change it.

15. Write the data.  
Repeat adjustments 10. to 15., and adjust so that both the cut off side and highlight side satisfy the specified values.
16. Exit the service mode.
17. Press the "MENU" key, select COLOR TEMP SELECT/ADJ, select 9300K, and exit the MENU.

18. Perform the same adjustments as steps 10 to 15 in the following conditions using No. 174 **[R.B]**, No. 176 **[B.B]**, No. 177 **[R.G]**, No. 179 **[B.G]** to satisfy the specified values.

9300K..... RED BIAS  
 9300K..... BLUE BIAS  
 9300K..... RED GAIN  
 9300K..... BLUE GAIN

Specified value: 9300K+8 MPCD

Adjust cutoff by 3 **[nit]**.

### 3-7-3. SUB BRIGHT Adjustment

1. Input the HD RGB gray scale signal to receive images.
2. Set CONTRAST to MIN and BRIGHT to center click.
3. Set the service mode.
4. In No. 180 **[SUB BRIGHT]**

0 → CUT OFF

SIRE → Adjust so that the screen slightly lights up.

5. Write the data.

### 3-7-4. SUB CONTRAST Adjustment

1. Input the DXC-9000 all white signal to receive images.
2. Set the color analyzer or luminance meter to the CRT, and set the controls on the front panel to the center click.
  - APERTURE : (Center click)
  - BRIGHT : 50% (Center click)
  - CHROMA : 50% (Center click)
  - CONTRAST : 80% (Center click)

3. Set the service mode.
4. Set the scanning size to 4:3 N/S mode.
5. Adjust No. 181 **[SUB CONTRAST]** so that the 4:3 N/S luminance satisfies the specified value.

Specified value: 140 ± 5 (NIT)

(User control center click state)

6. Set the scanning size to 4:3 U/S mode.
7. Adjust No. 182 **[SUB CONTRAST]** so that the 4:3 U/S luminance satisfies the specified value.

Specified value

(User control center click state)

140 ± 5 (NIT)

8. Input the all white signal of the HD component to receive images.
9. Set the scanning size to 16:9, N/S mode.
10. Adjust No. 183 **[SUB CONTRAST]** so that the 16:9 N/S luminance satisfies the specified value.

Specified value: 140 ± 5 (NIT)

(User control center click state)

11. Set the scanning size to 16:9 U/S mode.
12. Adjust No. 184 **[SUB CONTRAST]** so that the 16:9 U/S luminance satisfies the specified value.

Specified value: 140 ± 5 (NIT)

(User control center click state)

13. Write the data.

### 3-7-5. Component W/B Adjustment

1. Input the all white HD component signal (luminance is 3 [nit]) to receive images.
2. Set the color analyzer to the CRT, set the controls on the front panel to the standard position, and set the color temperature to 6500K.

APERTURE : MIN

BRIGHT : 50% (Center click)

CHROMA : 50% (Center click)

CONTRAST : 80% (Center click)

3. Set the service mode.
4. Measure the color temperature ((x,y) values).
5. Adjust No. 153 **[W/B DA CHROMA]** so that the y color temperature becomes the standard value when the CHROMA control is set to MAX.

6. Repeat steps 4 and 5 to perform tracking.

7. Write the data.

8. Return the controls on the front panel to their standard positions.

9. Adjust No. 155 **[W/B DA GREEN]** so that the white balance of the HD component (c/o: 3 [nit]) satisfies the specified value.

Specified value: 6500K+8MPCD

10. Write the data.

11. Write the adjustment value of step 5 added with 100 using No. 218 **[W-DA CHROMA SDI]**. However if the data exceeds 255, write as 255.

12. Write the adjustment value of step 9 added with 10 using No. 219 **[W-DA GREEN SDI]**. However if the data exceeds 255, write as 255.

13. Write the data.

# SECTION 4

## SAFETY RELATED ADJUSTMENTS

Perform the following checks and adjustments when replacing the following parts (marked  in the schematic diagram).

 : A board.... IC2015, IC3003, IC3005, IC3006, IC3007, R1183, R1192, R1193, R1209, R1224, R1225, R1289, R1290, R3060, R3061, R3062, R3063, R3078, R3079, R3080, R3083, R3084, R3085, R3107, R3109, R3110, R3122, R3138, R3139, R3140, R3152, R3153, R3154, R3155, R3158, R3200, R3201

 : G board.... IC602, T603

### +B CHECK

1. Connect a digital voltmeter to Pin ④ of CN605 of the G board.
2. Input the HD monoscope signal to receive images.  
Contrast : Center click  
Bright : Center click
3. Check that +B satisfies the specified valued.  
Specified value: +B .....  $115.0^{+0.5}_{-10}$  V

### HV REF Adjustment

Note: Perform conduction for more than 5 minutes before adjustments.

1. Connect the probe of the high voltage meter to the anode cap or to the HVR empty terminal.
2. Input the high vision monoscope signal to receive images.
3. Set the service mode. (Refer to 3-1-1. Service Mode.)
4. Adjust to satisfy the specified value using No. 187 .

Specifications for HV.REF voltage

20inch :  $27.0 \pm 0.2$  kV

14inch :  $25.0 \pm 0.2$  kV

5. Write the data.
6. Exit the service mode.
7. Adjust the focus again.

While tracking with FOCUS 1 (upper side, V) and FOCUS 2 (lower side, H) of T3003 (FBT) of the A board, adjust the focus of the whole screen consistently and not just the focus at the center.

### HV. PROT. REF Adjustment

Note: Perform conduction for more than 5 minutes before adjustments.

1. Connect a digital voltmeter to TP3007 (HV.PROT.REF) of the A board.
2. Input the high vision monoscope signal to receive images.
3. Set the service mode. (Refer to 3-1-1. Service Mode.)
4. Adjust to satisfy the specified value using No. 186 .

Specifications for HV. PROT. REF voltage

20inch :  $10.460^{+0.000}_{-0.460}$  V

14inch :  $10.000^{+0.000}_{-0.500}$  V

Note: Set to the largest adjustment value possible.

5. Write the data.
6. Exit the service mode.

### HV.PROT Check

1. Connect a d.c. stabilized power supply to Pin ⑤ of CN3008 of the A board.
2. Check that when the power is turned on, and 10.472V (20inch) and 10.020V (14inch) are applied using the stabilized power, the protector works and the raster disappears.

Specifications for HV.PROT supplied voltage

20inch : 10.472V

14inch : 10.020V

HV.PROT operating voltage

20inch : 30.0kV

14inch : 28.0kV

### IK.PROT Check

1. Set to the no-signal state.
2. Connect + side of the stabilized power supply to the TP3009 (ABL) and – side to less than –5V. Check that the protector works and the raster disappears.
3. Turn off the power and turn it on again to recover.

### A BOARD – A SIDE –

### G BOARD – B SIDE –

## SECTION 5

### CIRCUIT ADJUSTMENTS

#### 5-1. PREPARATIONS

##### 1. Equipment used

- (1) Signal generator (meeting signal specifications)
- (2) Oscilloscope
- (3) Frequency counter
- (4) Constant-voltage power supply

##### 2. Signal

Note 1: For the following items, input signals of the level indicated in the Specified Level column of the table.

Note 2: Input to "INPUT A" unless where the signal input is specified.

**Table of Signal Specifications**

Signal		Details of Signal	Specified Level p-w
Component	HD EDTV2 CCIR 274M	100% white (Y)	0.700 [V]
		75% white (Y)	0.525 [V]
		100% color (Pb, Pr)	0.700 [Vpp]
		75% color (Pb, Pr)	0.525 [Vpp]
		This item is peak-peak	
R G B	HD EDTV2 CCIR 274M	100% white (R, G, B)	0.700 [V]
		75% white (R, G, B)	0.525 [V]
		This item is peak-peak	

##### Signal Name

- HD :BTA S-001A (SMPTE 240M) specifications  
(1125/59.94, 60 Hz 2:1)  
:SMPTE 274M specifications
- EDTV2 :BTA T-1004 (SMPTE 293M) specifications  
(525/59.94 Hz 1:1)
- CCIR :Rec-709 specifications  
(1250/50 Hz 2:1)

##### Matrix Ratio

#### 5-2. A BOARD ADJUSTMENTS

##### 5-2-1. Horizontal Oscillation Frequency Adjustments

###### (1) BTA1125 (SMPTE 240M/274M) F0 adjustments

1. Perform conduction for more than 5 minutes before adjustments.  
Input the high vision and monoscope signals to receive images.
2. Set CONTRAST and BRIGHT to center click.
3. Set the service mode. Refer to "3-1-1. Service Mode".  
Change the No. 196 [1080 SELECT] data from "1" to "0".
4. Perform adjustments roughly so that there are no jitters on the screen using No. 2 [H.OSC], No. 3 [H.SIZE], No. 6 [H.KEY], No. 8 [H.PIN].
5. Exit the service mode.
6. Display the MENU screen, select SYNC SELECT, and set the EXT COMPOSITE SYNC mode.
7. Return to the MENU screen, and select 16:9/4:3 to set the 16:9 mode.
8. Set the service mode again.
9. Connect a frequency counter to TP3004 (HD).
10. Adjust No. 2 [H.OSC] so that the specified value is satisfied.

H. OSC low

H. OSC optimum

H. OSC high

BTA1125 F0 specifications :  $33.75 \pm 0.2\text{kHz}$

11. Write the data.  
Change back the No. 196 [1080 SELECT] data from "0" to "1".
12. Exit the service mode.

###### (2) EDTV2 F0 adjustments

1. Input the EDTV2 monoscope signal to receive images.
2. Set CONTRAST and BRIGHT to center click.
3. Set the service mode.
4. Perform adjustments roughly so that there are no jitters on the screen using No. 39 [H.OSC], No. 40 [H.SIZE], No. 43 [H.KEY], No. 45 [H.PIN].
5. Exit the service mode.
6. Display the MENU screen, select SYNC SELECT, and set the EXT COMPOSITE SYNC mode.
7. Return to the MENU screen, and select 16:9/4:3 to set the 4:3 mode.
8. Set the service mode again.
9. Connect a frequency counter to TP3004 (HD).
10. Adjust No. 39 [H.OSC] so that the specified value is satisfied.

H. OSC low

H. OSC optimum

H. OSC high

EDTV2 F0 specifications :  $31.50 \pm 0.2\text{kHz}$

11. Write the data.
12. Exit the service mode.

## 5-2-2. Adjustment of Signals

### (1) VIDEO Y, DA2 adjustment

1. Input the high vision component 100% color bar to receive images.
2. Connect the probe of the oscilloscope to TP1005 (2Y).
3. Set the service mode.
4. Adjust No. 154 **[Y.DA2]** so that the amplitude of the waveform satisfies the specifications.

Specifications for amplitude of signal components :  
750 ± 15 mVpp

5. Write the data.
6. Exit the service mode.

### (2) MATRIX BTA adjustments

#### (A) R IN

1. Input the high vision component 100% color bar to receive images.
2. Connect the probe of the oscilloscope to TP1010 (R.IN).
3. Set the service mode.
4. Adjust using No. 156 **[MDA1]**.

Note: If the conditions are not satisfied at the top and bottom of the waveform at the same time, adjust so that the conditions at the top are satisfied.

5. Write the data.
6. Exit the service mode.

#### (B) B IN

1. Input the high vision component 100% color bar to receive images.
2. Connect the probe of the oscilloscope to TP1012 (B.IN).
3. Set the service mode.
4. Adjust using No. 157 **[MDA2]**.

Note: If the conditions are not satisfied at the top and bottom of the waveform at the same time, adjust so that the conditions at the top are satisfied.

5. Write the data.
6. Exit the service mode.

#### (C) G IN

1. Input the high vision component 100% color bar to receive images.
2. Connect the probe of the oscilloscope to TP1011 (G.IN).
3. Set the service mode.
4. Adjust using No. 158 **[MDA3]** and No. 159 **[MDA4]**.

Note: If the conditions are not satisfied at the top and bottom of the waveform at the same time, adjust so that the conditions at the top are satisfied.

5. Write the data.
6. Exit the service mode.

### (3) MATRIX N10 adjustments

#### (A) R IN

1. Input the EDTV2 component 100% color bar to receive images.
2. Connect the probe of the oscilloscope to TP1010 (R.IN).
3. Set the service mode.
4. Adjust using No. 164 **MDA1**.

Note: If the conditions are not satisfied at the top and bottom of the waveform at the same time, adjust so that the conditions at the top are satisfied.

5. Write the data.
6. Exit the service mode.

#### (B) B IN

1. Input the EDTV2 component 100% color bar to receive images.
2. Connect the probe of the oscilloscope to TP1012 (B.IN).
3. Set the service mode.
4. Adjust using No. 156 **MDA2**.

Note: If the conditions are not satisfied at the top and bottom of the waveform at the same time, adjust so that the conditions at the top are satisfied.

5. Write the data.
6. Exit the service mode.

#### (C) G IN

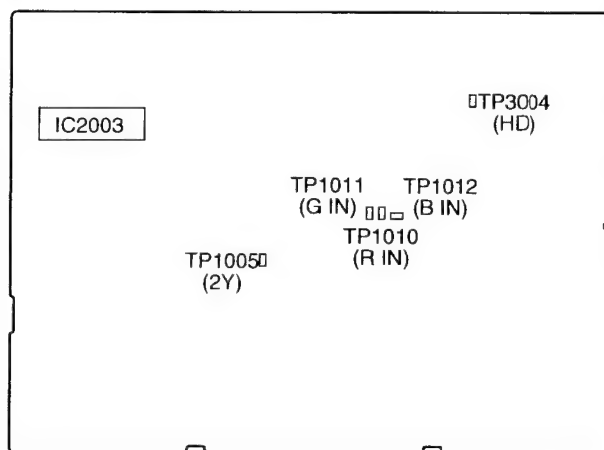

1. Input the EDTV2 component 100% color bar to receive images.
2. Connect the probe of the oscilloscope to TP1011 (G IN).
3. Set the service mode.

Note: If the conditions are not satisfied at the top and bottom of the waveform at the same time, adjust so that the conditions at the top are satisfied.

4. Adjust using No. 166 **MDA3** and No. 167 **MDA4**.
5. Write the data.
6. Exit the service mode.

### A board (Component Side)

#### **(4) MATRIX CCIR Adjustment**

##### **(A) R IN**

1. Input the SMPTE 274M component 100% color bar to receive images.
2. Adjust using No. 160 MDA1 in the same way as (2) MATRIX BTA adjustment (A).
3. Write the data.

##### **(B) B IN**

1. Input the SMPTE 274M component 100% color bar to receive images.
2. Adjust using No. 161 MDA3 in the same way as (2) MATRIX BTA adjustment (B).
3. Write the data.

##### **(C) G IN**

1. Input the SMPTE 274M component 100% color bar to receive images.
2. Adjust using No. 162 MDA3 and No. 163 MDA4 in the same way as (2) MATRIX BTA adjustment (C).
3. Write the data.

## SECTION 6

### CIRCUIT DESCRIPTIONS

#### 6-1. A BOARD

##### 6-1-1. A Board (1/4) Circuit

The 1/4 circuit is a sync signal processing block.

The CS signal (CS:Composite Sync, however Pin ① may be input with not only the CS signal but the G/Y as well by sync selection of the user) input from Pins ① of CN4 is sync-chip clamped by Q7 and Q12, passed through the sync

separation circuit composed of Q4006 to Q4016, separated to H sync and V sync, converted to negative polarity (Q4003, Q4004), and input to IC4006 (MC74HC153B) which is a sync select switch IC. IC4006 is a switch of the 4-input 1-output

2-circuit. It has sync separation circuits corresponding to the following signals:HD-VD input from Pins ⑦ and ⑨ of CN4, H sync and V sync which passed through the sync separation circuit, HD and VD input from the optional HD-SDI board, and Eureka format signals converted from H sync input from the sync separation circuit and V sync input from the Eureka sync separation circuit. The circuits are switched in the order of IC3 and the IC5.

The SEL H output from Pin ⑦ of IC4006 is input to the interlace/noninterlace determination circuit (ICs 1, 2:determines whether the input signal is interlaced or non-interlaced and sends data to the microprocessor), H delay circuit for deflection block (IC4005:circuit which delays the phase of the H sync with extracted equivalent pulse during H/V DELAY), and pulse generation circuit for sampling (IC4004, IC4009, IC4010) (Fig. 6-1).

The SEL V output from Pin ⑧ of IC4006 is input respectively to the interlace/noninterlace determination circuit (ICs 1, 2), V delay circuit for deflection block (IC4003:circuit which delays the phase of the V sync during H/V DELAY).

IC4001 and IC4002 are shift registers for the optional HD-SDI.

Fig. 6-1 (1). PHM Sampling Pulse Generation Circuit Timing Chart (Input:BTA S-001, V sync Periphery)

As BTA S-001 is a 3-value sync, it generates the sampling pulse using the rising edge of Pin ⑦ of IC4004 as the trigger (because sampling is not performed at the positive polarity side of the 3-value sync).

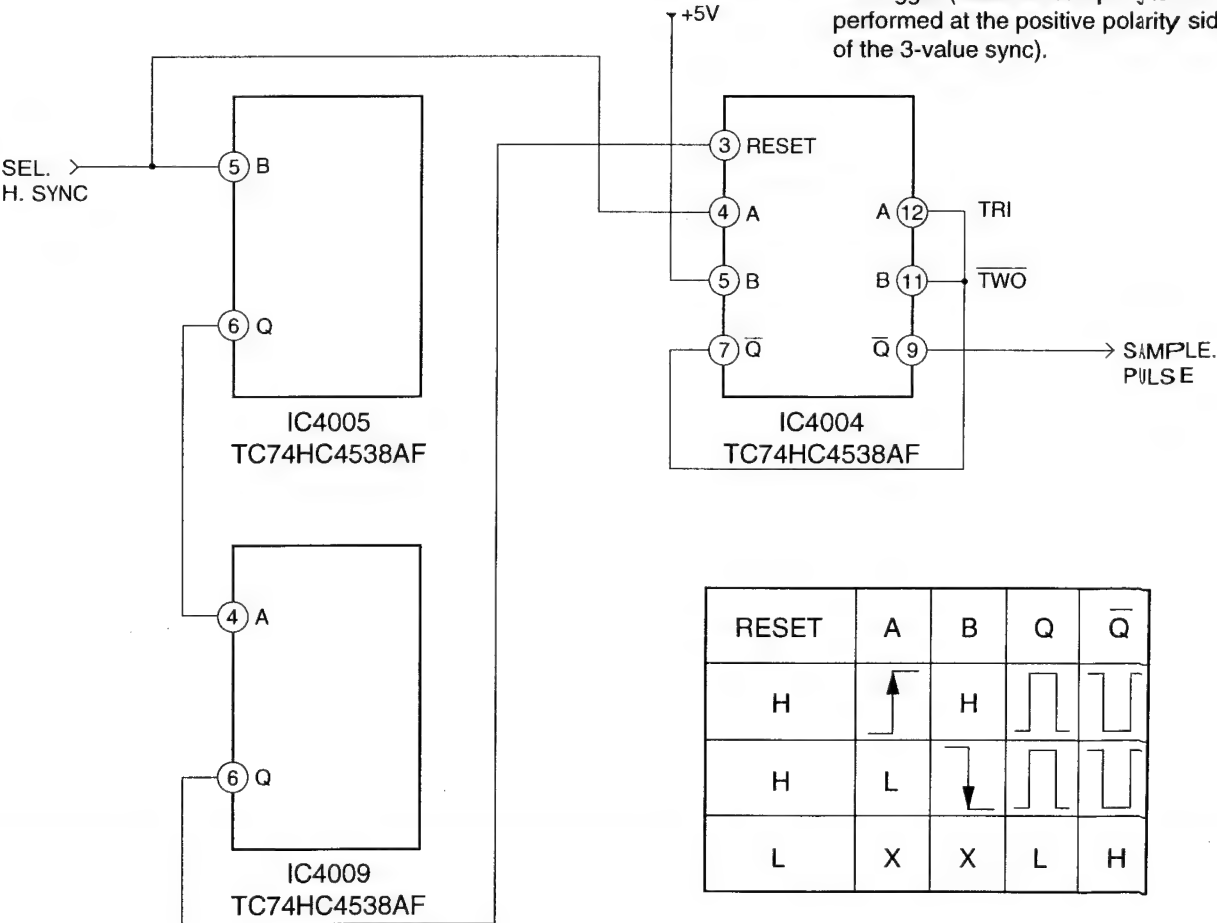

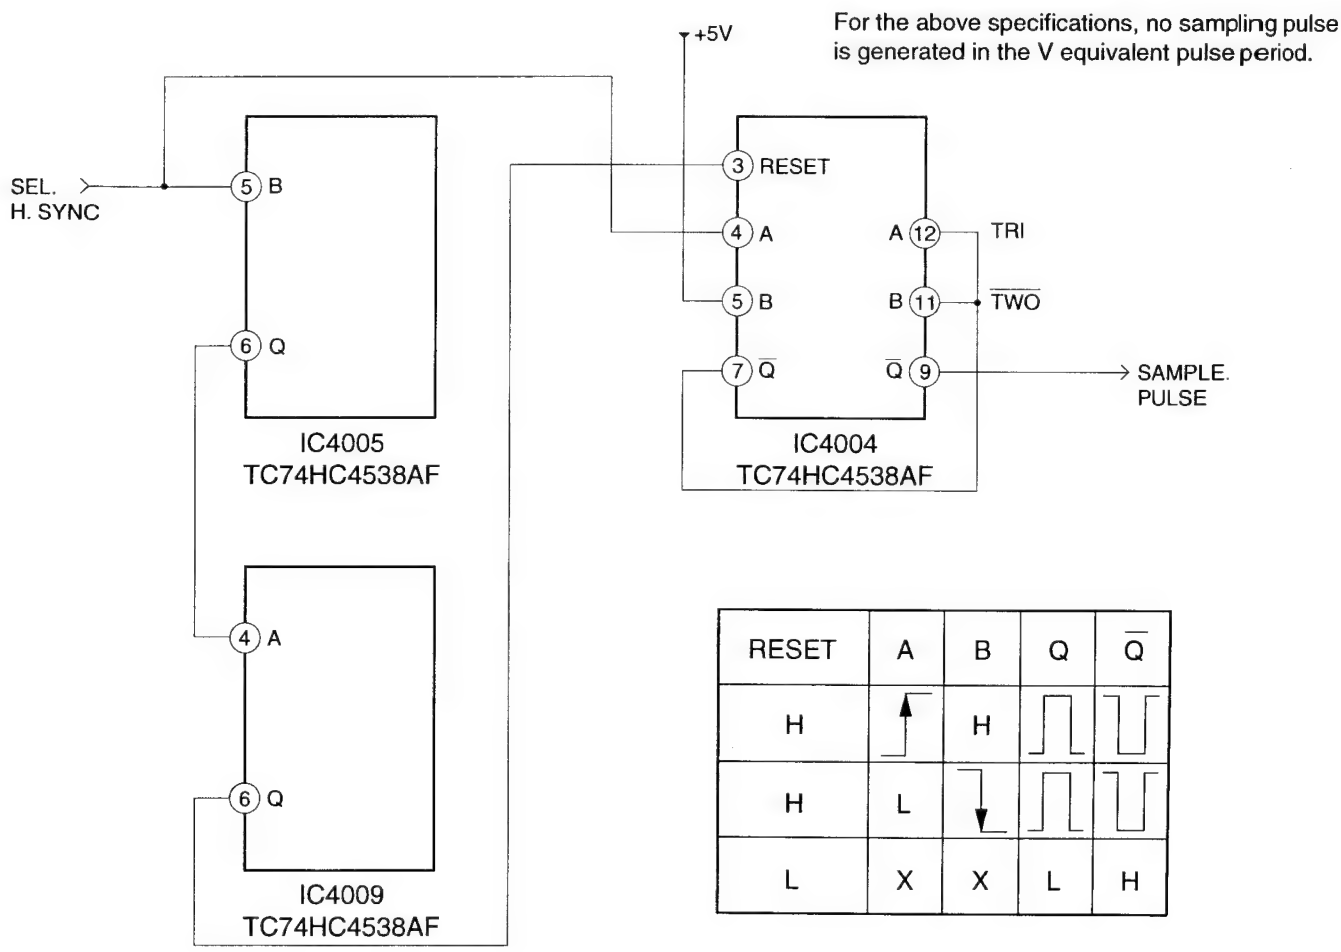

Fig. 6-1 (2). PHM Sampling Pulse Generation Circuit Timing Chart (Input: BTA T-1004, DXC-9000V Sync Periphery)

### 6-1-2. A Board (2/4) Circuit

The 2/4 circuit is a signal processing block.

IC1005 (MM1231XFF) is a switch which switches the G,B,R signals or Y, Pb, and Pr signals input from Pins ③, ⑤, and ⑦ of CN5, and the Y, Pb, and Pr signals of the optional HD-SDI input from Pins ⑦, ⑨, and ⑪ of CN4003. The output of IC1005 is input to the circuit (IC5002 to IC5004) which switches the retrace of H to the pedestal level. This circuit samples the pedestal (back porch) of the input signal (IC5004:MC14066BF), holds the potential to the capacitor, and switches the retrace portion of H to the voltage held (IC5002:MC14053BF). The signal output from the switching circuit is input directly to IC1015 (MM1231XFF:switches the RGB input signal and signals converted to RGB from the component) when the RGB mode is selected. If the Component mode is selected, it is input to IC1015 via the aperture circuit, chroma circuit, and matrix circuit.

The aperture circuit is composed of DL1001, DL1002, IC1016 (CXA1739S), etc. It enhances the contour by inputting the difference between the Y signal (luminance signal) and signals delayed in the delay line into the amplifier in IC1016, and adds the amplified difference to the signal (Q1029 base ground amplifier).

The chroma circuit is composed of IC1018 (LM393M), 1022 (CXA1521M), 1023 (CXA1521M), etc. It inputs the Pb and Pr signals (color difference signals) into the electronic control (IC1022, IC1023) to control the amplitude. It also functions to eliminate the chroma components by switching the signal to DC at a certain level when selecting the signal.

The matrix circuit serves to calculate the Y, Pb, and Pr signals pedestal clamped by IC1008 and IC1009 (MC14066BF) to generate the GBR signal. ( $G=Y-\alpha Pb-\beta Pr$ :  $\alpha, \beta$  are constants,  $B=Y+Pb$ ,  $R=Y+Pr$ ). In this circuit, the amplification of IC1007 and IC1010 (CXA1211M) is controlled by DAC for compatibility with three types of matrix ratios-BTA-S001, SMPTE, and Eureka.

The G, B, R signals selected by IC1015 (MM1231XFF) is input to the smear-proof circuit. This is a countermeasure circuit against poor pulse characteristics of IC1016 (when signals changing from white to black like the WINDOW signal are input, at the output side, the level of the white portion that had turned black will be lower than the actual black). This circuit generates pulse corresponding to the level when a signal higher than the pedestal level is input and adds this pulse to the original signal to deal with the poor characteristics (Fig. 6-2).

The G, B, R signals output from the smear-proof circuit are input to IC1016 (CXA1739S). This IC controls CONTRAST, BRIGHT, and the aperture, controls the auto white balance by detecting the current of the CRT cathode, performs blanking of signals, and adds the OSD (On Screen Display) generated by IC2014 ( $\mu$ PD6451GT) of the A board (3/4) circuit. The OSD signal is a digital signal, and because it is input to IC1016, and not passed through the smear-proof circuit mentioned above, smear of the screen occurs.

The circuit composed of IC1019 (TC74HC4538AF), IC5008 to IC5010 (TC74HC4538AF, TC7W74F, TC4569F) generates the timing for 4:3 AREA, MARKER (Fig. 6-3).

IC1001 (MC14094BF) is a shift register which outputs various control signals. IC1002, IC1011, IC2015 (M62358FP) is a DAC (D/A converter) which controls various adjustment values. IC5001 (TC74HC4538AF) generates clamp pulses used for IC1016 from the return pulse of the deflection block. IC1012 and IC1013 (MC14053BF) are switches which switch whether to control contrast, chroma, bright, and aperture using the controls on the front panel, or using the remote control unit (in this model, as the values cannot be switched using the remote control unit, the switches will always be set to the front controls.)

The circuit composed of Q1050 is the bright ABL circuit while the circuit composed of Q1051, Q1065 to Q1067 is a contrast ABL circuit. These ABL circuits function to decrease bright and contrast to prevent the deterioration of the CRT when the whole screen or some parts of the screen are too bright.

**\* Before countermeasure**

**\* After countermeasure**

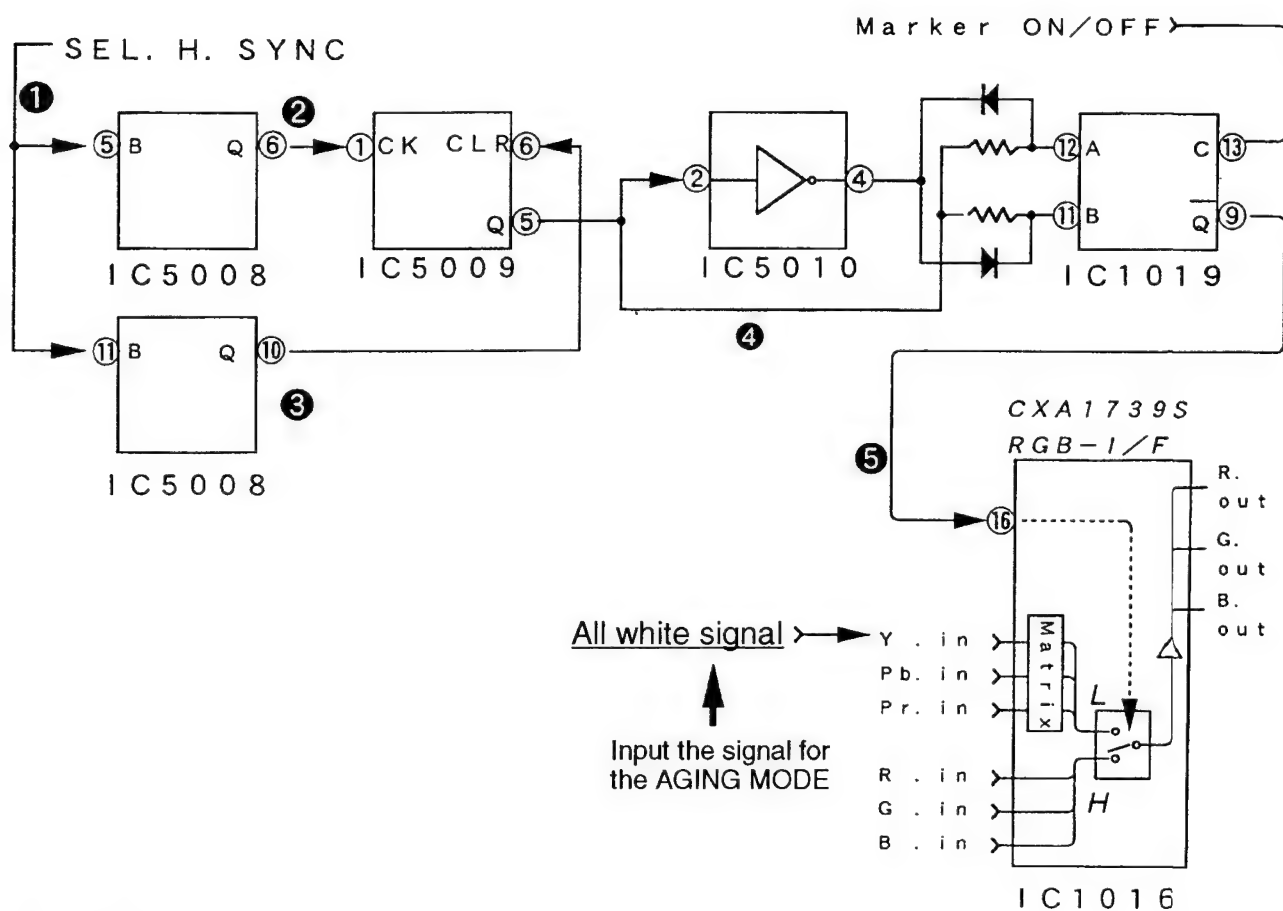

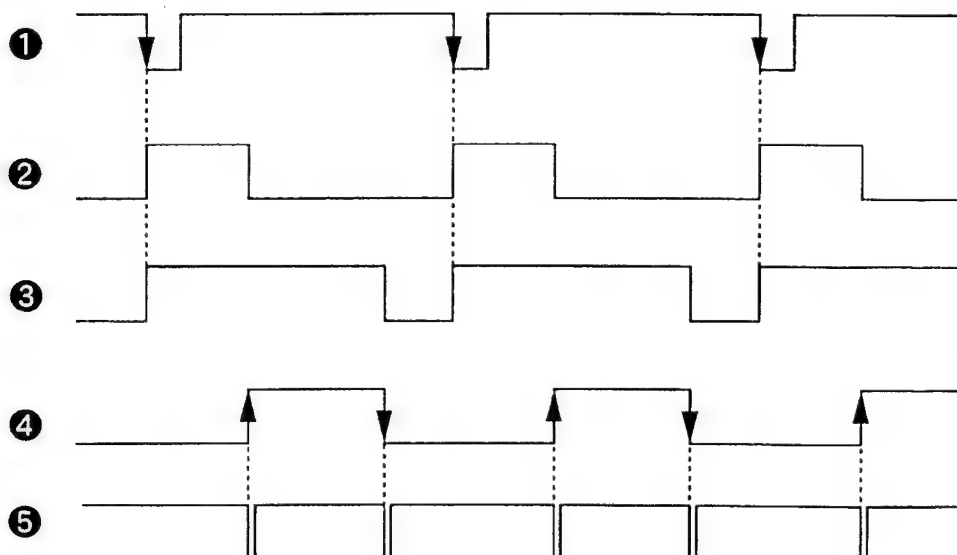

Fig. 6-2

Fig. 6-3. PHM4:3 Marker Timing Chart

\* Block Diagram

\* Timing Chart

### 6-1-3. A Board (3/4) Circuit

The 3/4 circuit is a small signal processing block for the microprocessor and deflection block.

IC2003 (HD6473257P) carries out various operations, control, determination, etc. using the CPU of the unit. The microprocessor mainly differentiates the input signal, loads data corresponding to the signal from the IC2005 and IC2006

(NM24C04EM8) memory, outputs control commands corresponding to the contents of the memory to the shift register and DAC, and controls various signal blocks and deflection block. IC2004 (MM1170BF) is a microprocessor watchdog timer. It generates reset pulses when the power voltage is cut to reset the microprocessor. When the system operates incorrectly, it also generates the reset pulse intermittently to prevent over-running of the microprocessor.

IC2013 (CXA1543M) is an oscillator of horizontal and vertical deflection frequencies. It controls the frequencies and phases of the H. Sync and V. Sync input from IC4006 (MC14053B) of the 1/4 circuit to generate HD and VD which are drive signals of the deflection block. IC2008 (CXA1470AM) and IC2010 (CXA8021M) is an IC which generates the correction waveform for the deflection block. IC2012 (MC14066BF) is a switch which switches the amplitude level of the vertical deflection waveform which switching the screen size between 4:3 and 16:9. IC2020 (MC74HC74AF) generates the pulse for determining the vertical blanking pulse and synchronizes the chroma off (decreases the chroma control and switches the color difference signal to DC) timing with the vertical blanking.

IC2001 (NJM7912FA) and IC2002 (NJM7905FA) are -12V and -5V regulators respectively.

### 6-1-4. A Board (4/4) Circuit

The 4/4 circuit is composed of an audio block, horizontal deflection block, video signal pre-amplifier, and high voltage block.

IC3001 (AN5265) is an audio amplifier. By turning ON the Q3002 transistor, the sound can be muted.

IC3003 (CXA1544M) is composed of a circuit which outputs the pulse for PWM control of the horizontal deflection output (feed backs the horizontal deflection signal returned and controls the pulse width) and a circuit which outputs the pulse for PWM control of high voltage outputs. IC3005 (TL431CPS) is a shunt regulator which generates high voltage reference voltages.

Q3003 to Q3011 and Q3033 to Q3035 are pre-amplifiers. The G, B, R signals output from the 2/4 circuit IC1016 (CXA1739S) are input, amplified by approximately 5.3 dB, and output to the C board.

IC3009 (LA6500FA) controls the current flowing to the LCC coil (Landing Compensation Coil).

Q3031 (2SD1878) is a HV OUT transistor. The base is input with a horizontal drive signal output from Pin ⑳ of IC3003 via T3001 HDT (Horizontal Drive Transformer). The PWM output from high voltage of IC3003 is input to the Q3030 (IRF19630GS) gate of FET. Converted to the +B level PWM output, added to the Q3031 collector via the T3002 LOT (Linearity Output Transformer), and input to the T3003 FBT (flyback transformer) to generate high voltage (20inch :27 kV, 14inch :25 kV). The 30V output voltage of the secondary winding of the FBT is input to L3007:DFT (Dynamic Focus Transformer) to generate the parabola waveform voltage in the horizontal period, and added to the Focus input terminal of the FBT. Good focus can be obtained at the center and corners in the horizontal direction on the screen by this dynamic focus. Q3042 (2SC3262) is a switch for attenuates the dynamic focus in the horizontal blanking period, to reduce interfering to the current detection pulse (reference pulse used for auto white balance) of the dynamic focus voltage.

(2/2) and Q3016, 3017, 3039 of IC3007 (LM393M) is a IK protector. When Q3016 turns ON, the IK protector operates. (2/4) and (3/4) of IC3004 (MC14011BF) is a H protector. When Pin ① or ② of IC3004 drops to a "low" level, the H protector operates.

IC3004 (4/4) is a V protector. When Pin ⑧ or ⑨ of IC3004 drops to a "low" level, the V protector operates.

(1/2) and Q3036 to Q3038 of IC3007 (LM393M) is a HV protector. When Q3037 turns ON, the HV protector operates. IC3006 (TL431CPS) is a shunt regulator which generates reference voltage for the high voltage protector.

## 6-2. P BOARD

The P board is composed of the horizontal/vertical deflection output circuit and V.STA (Vertical Static Convergence) circuit.

IC901 (TDA8172) is an IC for vertical deflection output. The output is connected to the DY (deflection yoke). IC901 is fed back with the return voltage of DY. By changing the feedback volume, the V deflection volume is changed between 14-inch and 20-inch. Q902 is a V protector switch. By switching this on, the protector operates. Q911 is a H.OUT (horizontal deflection output) transistor.

The output is connected to DY. When this transistor stops outputting, the voltage separating the output (C932 and C933) becomes "0" and the H protector operates. The correction of the horizontal deflection is performed by

switching the +B voltage using the FET Q903 (IRF19630GS). If the H.OUT transistor breaks down or short-circuits, R916 and Q903 will break down simultaneously. For this reason, when Q911 breaks down, there is a need to replace them simultaneously.

IC904 (RC4558) (2/2) is a V.STA circuit. The output is connected to the NTC (Neck Twist Coil) at the neck of the CRT.

## 6-3. C BOARD

The C board is a video amplifier. The G, B, R signals input from the pre-amplifier is input to a video amplifier of the C board (cascade connection push-pull output type). The gain is about 25 dB for 14inch, and about 27 dB for 20inch.

## 6-4. G BOARD

The G board is a power supply board. IC601 (STR-M6524) is a primary switching regulator IC. When a load current flows excessively, the OCP (Over Current Protector) operates. IC602 (STR-S3115) is a secondary series regulator IC. It generates +B voltage (115V). When the load current of the +B line flows excessively, R616 becomes open. T603 is a SRT (Switching Regulation Transformer). Q602 is a 160V regulator. When load current flows excessively, R629 becomes open.

IC603 (NJM7806FA) and 604 (NJM7805FA) are a 5V (A) and 5V (B) 3-terminal regulator respectively. When load current flows excessively, R617 becomes open. Q603 is a +15V regulator. When load current flows excessively, R617 becomes open. Q601 is a degauss switch. When this transistor turns ON, the relay (RY601) turns ON, and current flows to the degauss coil. PH601 is a photo coupler. The current corresponding to changes in the +B current due to AC voltage changes or load changes flows from Pin ① to Pin ② of the photo coupler. As a result, the current flowing from Pin ⑤ to Pin ④ of the photo coupler is controlled by this current. In other words, a feedback is imposed so that when the +B voltage becomes high, the current flowing from Pin ⑤ to Pin ④ increases, decreases the switching pulse width of IC601, and decreases the +B voltage. When the +B voltage becomes low, a feedback is imposed so that the current flowing from Pin ⑤ to Pin ④ decreases, increases the switching pulse width of IC601, and increases the +B voltage.

## 6-5. H BOARD

The H board is a control board.

RV501 to RV505 are user controls.

S501 to S511 are tact switches for user control.

## 6-6. Q BOARD

The Q board is an input/output terminal board.

IC401 (MM1231XFF) is a switch which switches the video signals of inputs A and B. Q424 to Q429 are switches which prevent video crosstalk. When input A is selected, Q424 to Q426 turn ON, when input B is selected, Q427 to Q429 turn ON, and when input C is selected, Q424 to Q429 turn ON, to turn off the buffers (Q401 to Q403, Q405, Q407, Q409) of the signal line and cut off the signal. IC402 (MC74HC00AF) performs logic calculation for turning ON/OFF the switch which prevents video crosstalk. IC403 (MM1113XFF) is a switch which switches the signal input to the sync separation circuit on the A board to G/Y or HD/CS. IC404 (MC14053BF-T2) is a switch which switches the HD/CS, VD, AUDIO signals of inputs A and B. IC405 (MC74HC86F-T2) carries out logic calculation fixing the HD or VD signal input in the positive polarity or negative polarity to the negative polarity.

IC406 and IC407 (XRU4021BF) convert the parallel remote input to the serial remote. When Pin ⑨ (P/S terminal) of IC406 and IC407 drop to "Low", it outputs the parallel-input data in serial format from the rising edge of the next clock sequentially. (The length of 1 data is the same as 1 period of the clock. The data output is output sequentially in the order of P8, P7...P1 of Pin ① of IC406, then P8, P7...P1 of IC407.

## 6-7. DETECTION OF MALFUNCTIONS

This unit is equipped with a malfunction detection circuit. The malfunction is differentiated by Pins ③⑨ to ③⑩ of the CPU (IC2003). However malfunctions where nothing is input to the above pins cannot be detected. The malfunction can be differentiated by the number of times the remote LED on the front control panel of the unit blinks.

### \* Number of Blinking and Malfunction Location

- Once..... Horizontal deflection output malfunction (short-circuit of Q911, Q903, R916 of the P board, etc.)
- Twice ..... Vertical deflection output malfunction (Short-circuit of IC901 of the P board, etc.)
- Three times .... High voltage protector operations
- Four times ..... IK protector operations
- Five times ..... The FAN has stopped, or the fan stopped due to high voltage output malfunction.

### \* When no image is output and the remote LED is not lit

- \* When the power LED is not blinking:  
12V fault may be suspected.
- \* When the UNDERSCAN switch is pressed and the UNDERSCAN LED is not lit:  
5V (B) fault may be suspected.
- \* Both above:  
The whole power board may be faulty.  
(Disconnection of fuse, no AC, SRT fault)

### EXPLODED VIEWS

**NOTE :**

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- The construction parts of an assembled part are indicated with a collation number in the remarks column.
- Items marked " \* " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

The components identified marked  $\Delta$  are critical for safety.  
Replace only with the part number specified.

# SECTION 9

## ELECTRICAL PARTS LIST

A

### NOTE :

The components identified marked  $\Delta$  are critical for safety.  
Replace only with the part number specified.

Les composants identifiés par une marque  $\Delta$  sont critiques pour la sécurité.  
Ne les remplacer que par une pièce portant le numéro spécifié.

- Items marked “\*” are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

When indicating parts by reference number, please include the board name.

- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.

### RESISTORS

- All resistors are in ohms
- F : nonflammable

### CAPACITORS

- PF :  $\mu\text{F}$

### 11-1. FRAME SCHEMATIC DIAGRAM

11-2. PRINTED WIRING BOARDS/SCHEMATIC DIAGRAMS

Note:

- All capacitors are in  $\mu\text{F}$  unless otherwise noted.  $\text{pF}$ :  $\mu\mu\text{F}$  50WV or less are not indicated except for electrolytics.
- Indication of resistance, which does not have one for rating electrical power, is as follows.

Pitch: 5 mm  
Rating electrical power 1/4W

- All resistors are in ohms. (1M: 1000k $\Omega$ , 1k: 1000 $\Omega$ )
-  : nonflammable resistor.
- Chip resister are 1/10W unless otherwise noted.
-  : fusible resistor.
- $\Delta$  : internal component.
-  : panel designation and adjustment repair.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
- METAL CHIP (:RN, :RN-CP) resister in 1%, 0.5%, 1/4W unless otherwise specified.
- The components identified by  in this basic schematic diagram have been carefully factory-selected for each set in order to satisfy regulations regarding X-ray radiation. Should replacement be required, replace only with the value originally used.
- When replacing components identified by  , make the necessary adjustments indicated, If results do not meet the specified value change the component identified by  and repeat the adjustment until the specified value is achieved. (Refer to page 4-1.)

Part replaced (  )	Checked
T603, IC602 ..... G board	(+B VOLTAGE)

- All voltages are in V.
- Reading are taken with Component color-bar signal (R.G.B, HD, VD) input.
- Voltage are dc with respect to ground unless otherwise noted.
- Voltage variation may be noted due to normal production tolerancd.
-  : B+, B- line
-  : signal path
- Circled numbers are waveforms reference.

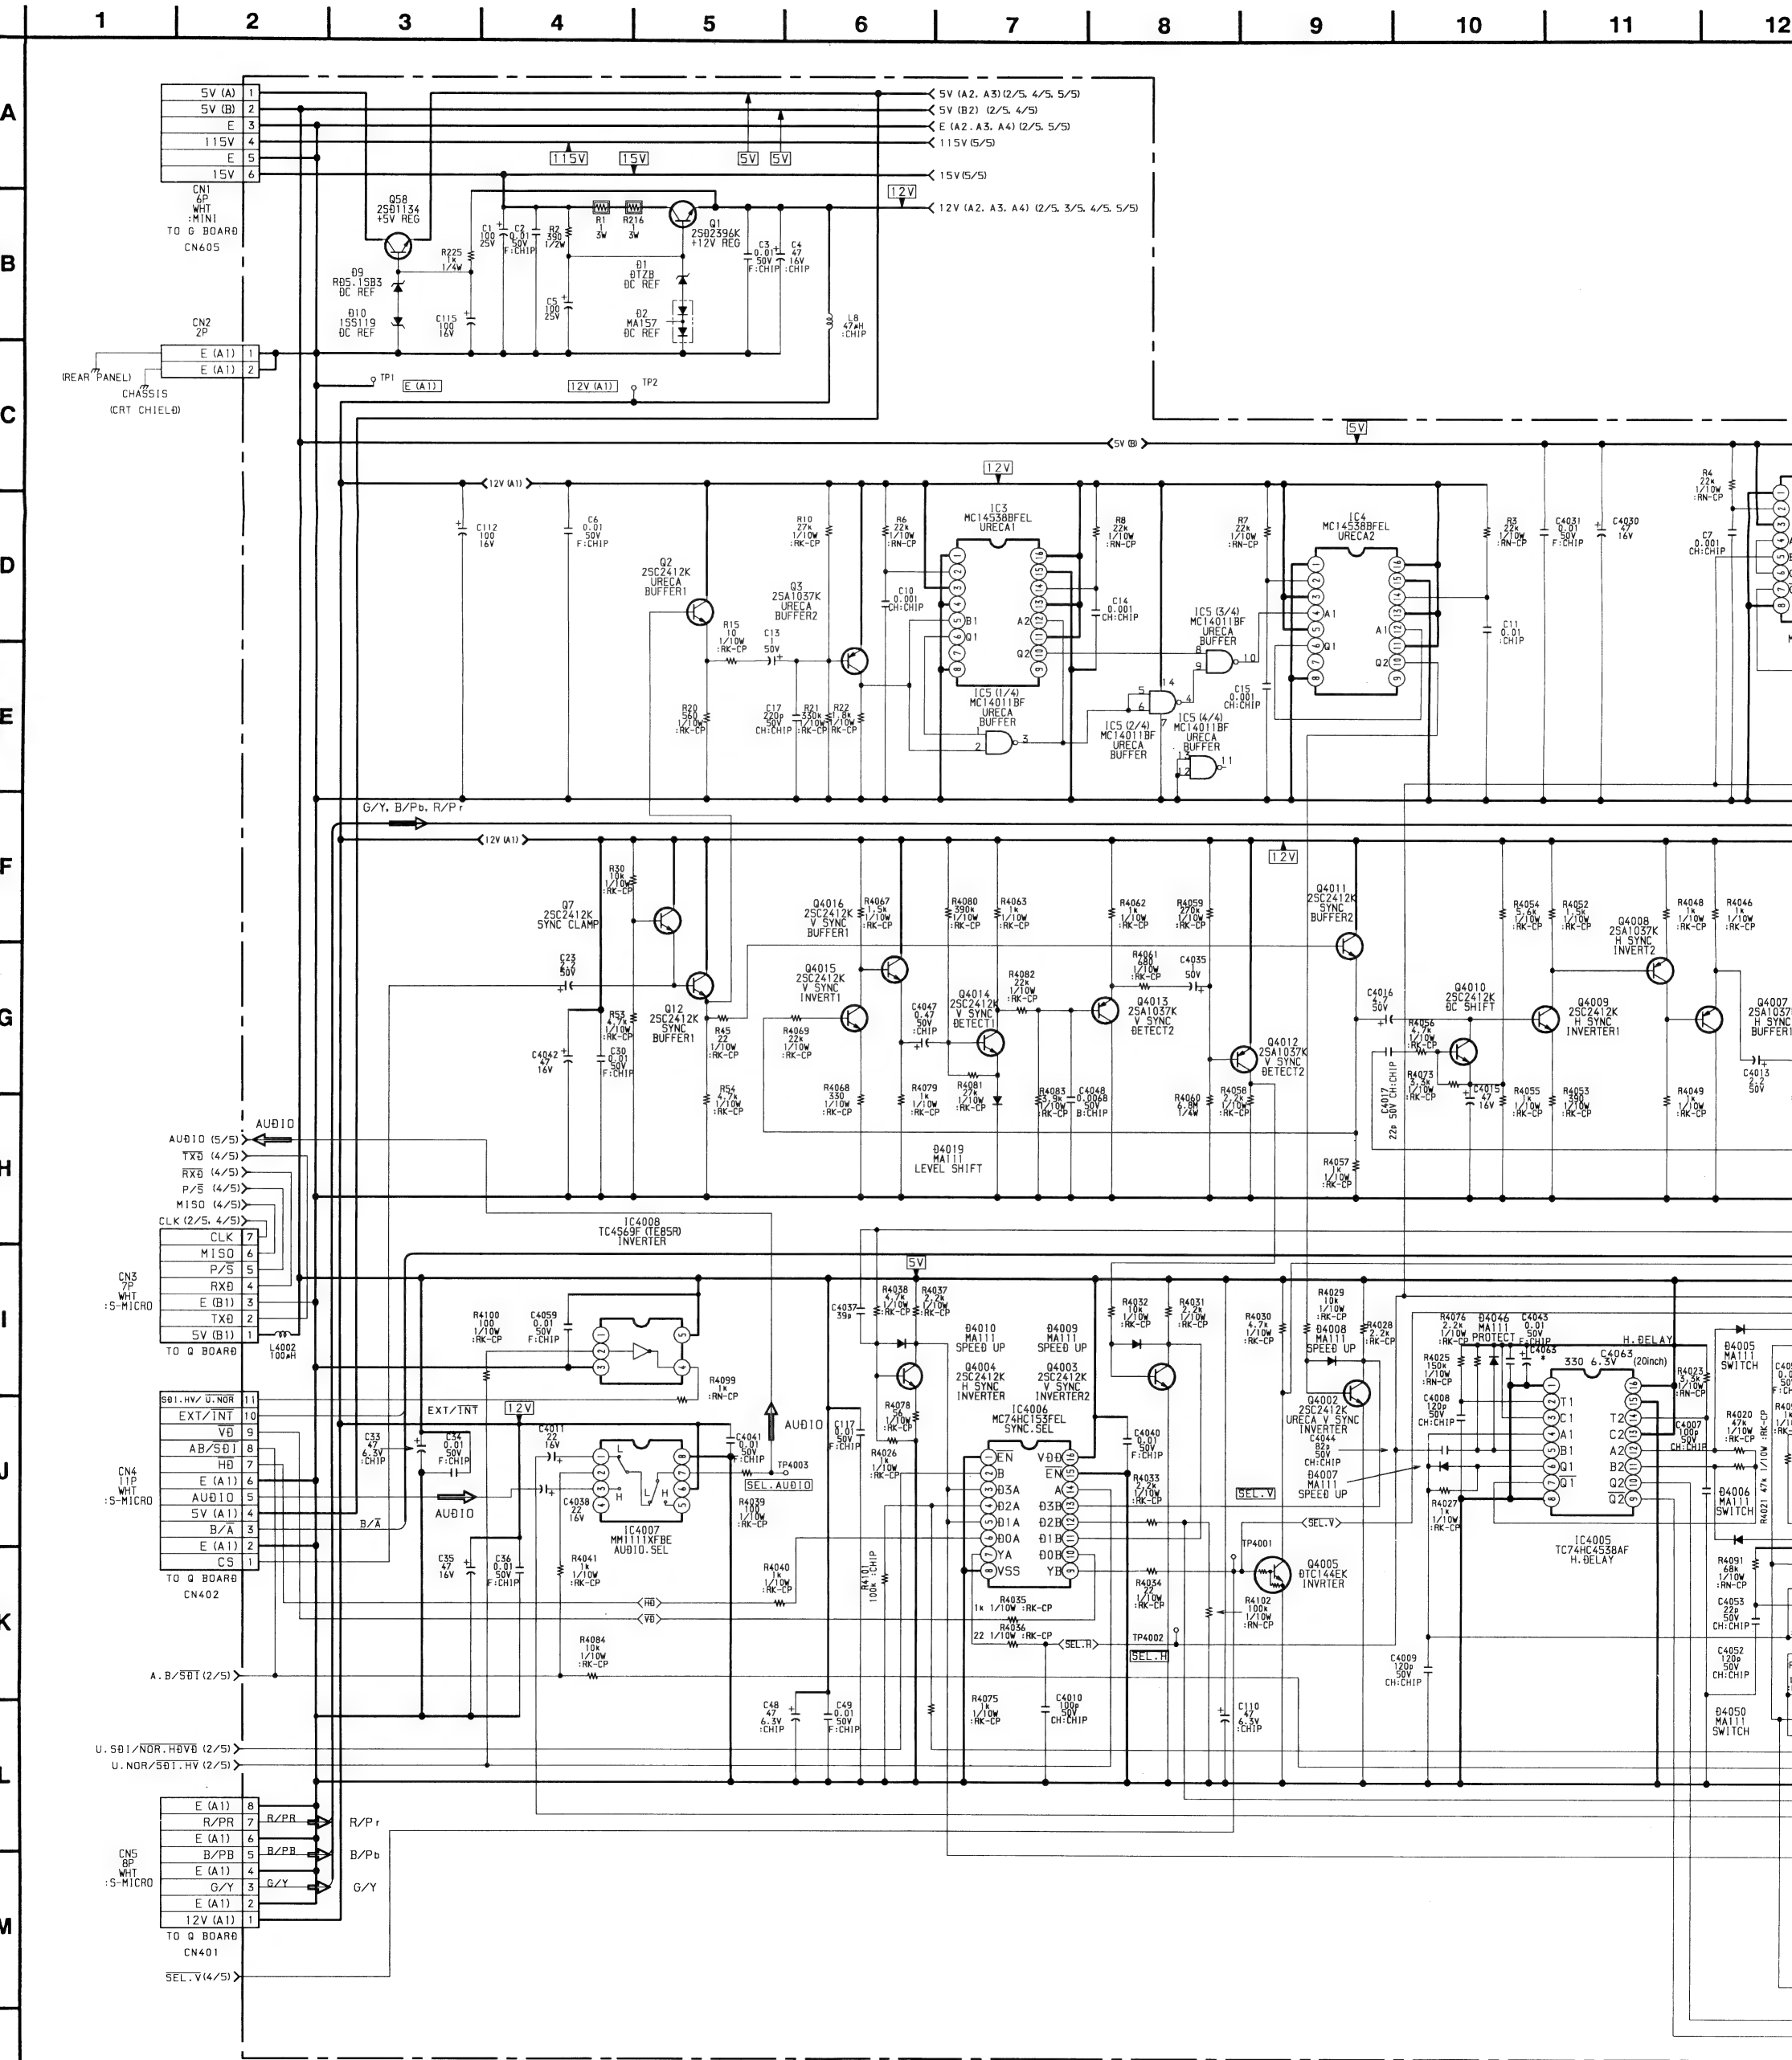

Reference information

RESISTOR	: RN	METAL FILM
	: RC	SOLID
	: FPRD	NONFLAMMABLE CARBON
	: FUSE	NONFLAMMABLE FUSIBLE
	: RW	NONFLAMMABLE WIREWOUND
	: RS	NONFLAMMABLE METAL OXIDE
	: RB	NONFLAMMABLE CEMENT
COIL	: LF-8L	MICRO INDUCTOR
CAPACITOR	: TA	TANTALUM
	: PS	STYROL
	: PP	POLYPROPYLENE

	: MPP	METALIZED POLYPROPYLENE
	: ALB	BIPOLAR
	: ALT	HIGH TEMPERATURE
	: ALR	HIGH RIPPLE

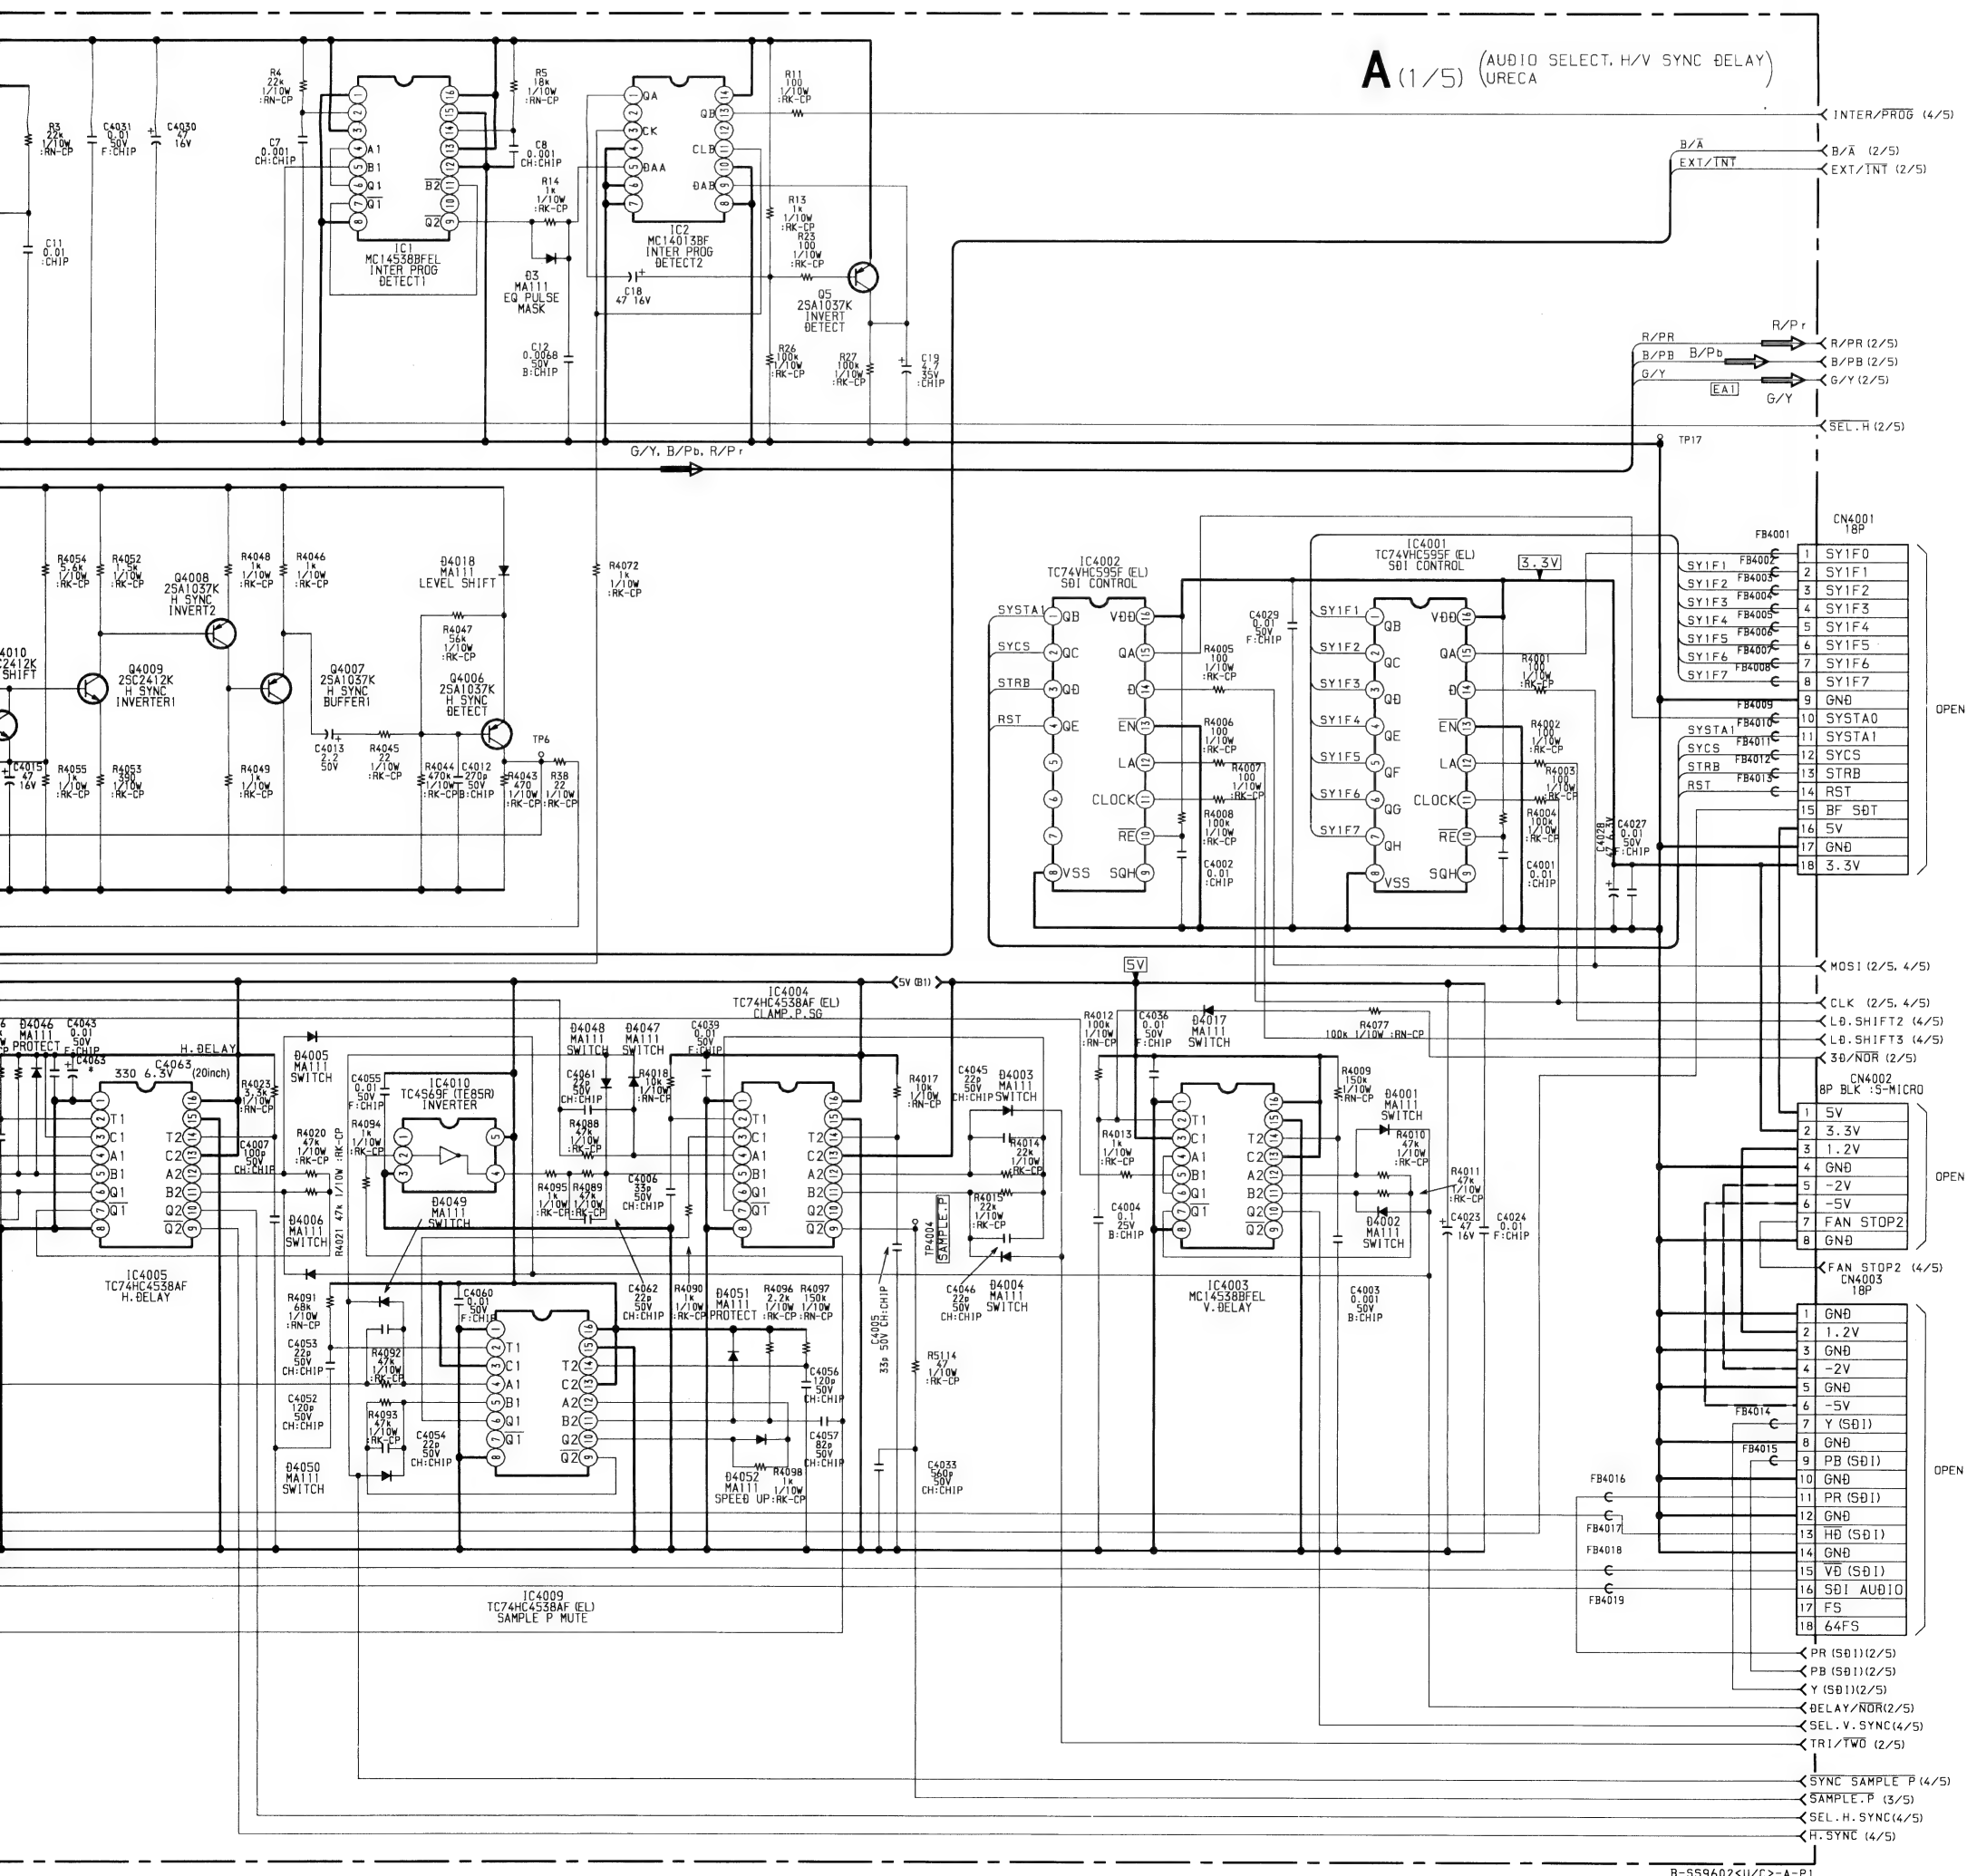

The components identified marked  $\Delta$  are critical for safety.  
Replace only with the part number specified.

Les composants identifiés par une marque  $\Delta$  sont critiques pour la sécurité.  
Ne les remplacer que par une pièce portant le numéro spécifié.

The image contains five circuit diagrams:

- ADM232LAR (IC408)**: A schematic diagram of a voltage boost circuit and voltage inverter. It shows a boost circuit with a transformer (T1) and a voltage inverter with a transformer (T2). The circuit includes input pins C1+, C1-, C2+, C2-, T1in, T2in, R1out, R2out, and output pins Vcc, V+, V-, T1out, T2out, R1in, R2in, and GND.
- MC14053BF (IC404)**: A schematic diagram of a 5-bit binary counter. It shows a 5-bit counter with inputs X1, X0, Y1, Y0, EN, VEE, and GND, and outputs VDD, XC, ZC, Z1, Z0, AZ, AX, and AY.
- MM1231XFF (IC401)**: A schematic diagram of a 3-bit counter. It shows a 3-bit counter with inputs IN 1 A, GND 1, IN 2 B, Vcc, SW 2, IN 2 A, GND 3, IN 3 B, and outputs OUT 1, GND 2, OUT 2, OUT 3, SW 3, and IN 3 A.
- XRU4021BF (IC406, 407)**: A logic diagram of a 4-bit counter. It shows a 4-bit counter with inputs P/S, Ds, and CLOCK, and outputs Q6, Q7, and Q8.
- MM1231XFF (IC401)**: A logic diagram of a 3-bit counter. It shows a 3-bit counter with inputs IN 1 A, GND 1, IN 2 B, Vcc, SW 2, IN 2 A, GND 3, IN 3 B, and outputs OUT 1, GND 2, OUT 2, OUT 3, SW 3, and IN 3 A.
